MONTREAL.AI × GOALOS

COMMERCIAL OPERATING PLAYBOOK

Autonomous Commercial & Pricing Playbook

The zero-seller standard lane from consequential objective to recurring Proof Office.

No value pool, no offer. No margin floor, no quote. No proof, no renewal.

Commercial operating mandate

The Autonomous Money Machine Ω must become the system through which GoalOS is purchased—not a copilot helping someone sell it.

> **Zero-touch in the standard commercial lane. Human-sovereign at the constitutional boundary. Fail closed outside approved scope, price, rights, claims or contract paths.**

1. The standard lane

State	Customer experience	GoalOS action	Receipt
Discover	Sees a relevant proof problem and enters a permissioned diagnostic	Personalized Readiness Scan	Consent and source record
Diagnose	Submits objective, claims, documents, deadline and value at stake	Maps Proof Debt and product fit	Diagnostic packet
Qualify	Reviews fit, risk, exclusions and value case	Scores sponsor, budget, urgency, evidence and scope	Qualification decision
Price	Receives one fixed product and delivery date	Applies value and margin floors	Quote and economic case
Contract	Reviews approved SOW, DPA, terms and evidence standard	Generates documents within clause matrix	Signed agreement
Fund	Pays Activation or mission deposit	Creates receipt and reserves capacity	Payment and capacity receipt
Instantiate	Receives secure mission room	Freezes Mission Contract and Docket	Mission hash / version
Deliver	Inspects work, evidence, costs, failures and decisions	Executes bounded jobs and routes review	Evidence Docket
Accept	Approves, conditions or disputes under frozen rubric	Records terminal state and value ledger	Acceptance / dispute receipt
Recurr	Activates continuing Office	Provisions monitoring, Chronicle and entitlements	Subscription and Office plan
Expand	Receives evidence-based next-mission proposal	Uses verified need and value—never generic cross-sell	Expansion decision

2. Autonomous offer ladder

Offer	Fixed input	Fixed output	Price	Payment
Proof Readiness Scan	Objective, documents, value, deadline	Initial Proof Debt and recommendation	Free–$495	Upfront if paid
Proof Mission Activation	One consequential decision	Mission Contract, claims, evidence plan, ROI case	$15,000	100% prepaid

Offer	Fixed input	Fixed output	Price	Payment
Standard Proof Mission	One frozen mission	Evidence Docket, review, governed decision	$75,000	50% / 30% / 20%
Proof Office	Accepted mission + continuing need	Continuous evidence, Chronicle, reporting and mission queue	$18,000/month base	Annual prepaid preferred
Private Enterprise Network	Multi-system recurring control	Dedicated integrations, private graph and protected runtime	$500,000/year base hypothesis	Deployment fee + annual commitment
Protected Invocation	Current entitlement + scoped request	Result, evidence and invocation receipt	$500+ per invocation hypothesis	Metered / committed usage

3. Qualification score

GoalOS should automatically qualify on a 100-point scale. Standard-lane entry requires at least 70 points and no disqualifying risk.

Dimension	Weight	Passing evidence
Value at stake	25	Conservative value ≥4× proposed first-year fee
Executive authority	15	Named sponsor can approve budget and acceptance
Urgency	10	Decision within 90 days
Evidence readiness	15	Inputs available; acceptance can be frozen
Repeat potential	15	Continuing monitoring, claim, governance or commercial need
Scope fit	10	Standard mission class; bounded exclusions
Rights clarity	5	Learning and reuse treatment can be contracted
Risk fit	5	No prohibited or unmanageable high-consequence path

4. Pricing engine

> **Quoted price = max[5–15% of conservative attributable value, expected variable cost ÷ (1 − target gross margin)] + assurance / exclusivity / complexity adjustments.**

Adjustment	Rule
Customer-private learning	Add 25–50%
Sector or time-limited exclusivity	Add 100–300%
Expedited delivery	Add 25–50%
Regulated / external-specialist review	Pass through cost + assurance margin

Adjustment	Rule
Nonstandard data or integration	Separate module; never hide in standard price
Customer-proposed discount	Reduce scope, rights, assurance or service level—never breach margin floor
Outcome fee	Optional 5–10% of independently attributable incremental value where lawful; fixed fee remains

5. Approved contract path

1. Standard position.

2. Approved fallback A.

3. Approved fallback B.

4. Approved price or scope adjustment.

5. Decline.

The autonomous deal room may negotiate only within a counsel-approved clause library. Unlimited liability, unsupported warranties, customer ownership of the private capability network, uneconomic payment terms, unbounded use rights or prohibited data access cause automatic repricing, scope reduction or rejection.

6. Claim and evidence policy

Claim class	Rule
Product capability	Answer only from current, approved and versioned product records
Security / privacy	Never invent certification or control; cite exact approved evidence
Customer outcomes	Use only customer-authorized, bounded and current evidence
Financial ROI	Label forecast, supported and realized value separately
Delivery date	Quote only reserved capacity and standard-scope timing
Legal / regulatory	Provide readiness and evidence management; qualified professionals retain formal opinions
Competitive claims	Use sourced, date-stamped comparisons with limitations

7. Proof Office conversion

The conversion should be generated from the delivered Evidence Docket, not from a generic subscription pitch.

Evidence from first mission	Proof Office module
Unresolved Proof Debt	Continuing mission queue and evidence collection
Claims with expiry or drift risk	Continuous claim monitoring
Recurring model or vendor changes	Evaluation and re-authorization
Controls requiring replay	Scheduled testing and audit-ready evidence
Accepted capability	Version, entitlement, invocation and rollback management
Board / investor reporting need	Quarterly Proof Brief and Value Ledger
Commercial claim reuse	RFP-to-Revenue claim graph and approval workflow

8. Renewal and expansion

> **Never renew because time elapsed. Renew because GoalOS can show what changed, what value was created or protected, what became stale, what remains unresolved, and what the next evidence program must accomplish.**

- 90 days before renewal: issue value and evidence ledger.
- 60 days: define continuing Proof Debt, capability lifecycle and expected value.
- 30 days: present fixed Office scope, price and annual capacity reservation.
- If continuing need cannot be supported, recommend downgrade or stop.
- Expansion is triggered by accepted adjacent objectives—not generic seat growth.

9. Commercial Chronicle

GoalOS must learn commercially without optimizing for superficial proxy metrics. A method may become reusable only after it produces collected cash, positive contribution, qualified customers, acceptable retention and no material trust breach on a fresh cohort.

Candidate commercial skill	Admission evidence
Account-selection method	Higher qualified purchase rate without compliance harm
Readiness Scan question	Improves qualification and later customer value
Price point	Positive contribution and no deterioration in conversion quality or retention
Objection response	Supported by evidence; does not increase refunds, scope debt or churn
Contract fallback	Acceptable risk and economics after delivery
Onboarding sequence	Lower time-to-value and evidence omissions
Renewal trigger	Higher retained gross profit and customer-verified value

10. Commercial control dashboard

Metric	Initial target	Fail condition
Seller-side minutes / standard transaction	0	Any routine founder intervention
Activation GM	≥95%	<90%
Proof Mission GM	70–80%	<60% after second delivery
Proof Office GM	≥80%	<70%
CAC payback	<6 months	>12 months
Mission → Office conversion	≥40%	<30%
Mature NRR	≥120% target	<100%

Metric	Initial target	Fail condition
Unsupported material commercial claims	0	Any
Standard quotes below margin floor	0	Any
Unrecorded human interventions	0	Any
Collected cash / booked revenue	≥95%	<90%

11. Commercial constitution

> **No permission, no outreach. No consequential objective, no qualification. No measurable value pool, no offer. No margin floor, no quote. No approved clause path, no contract. No payment, no capacity. No Docket, no value claim. No verified need, no renewal. No positive contribution, no commercial skill admission.**

Selected sources and claim boundary

External sources support market timing, technical feasibility, pricing context and comparative benchmarks. All GoalOS prices, volumes, margins, ROI, financing and valuation paths are editable management hypotheses—not audited forecasts, realized results, legal advice, investment advice, security certification or guarantees. Full URLs and source-use notes are provided in the package Source Register.
