G

THE OPTIMAL GOALOS BUSINESS MODEL

A services-led, software-scaled, capability-licensed Proof Utility

Diagnose almost for free. Price by value. Prove the outcome. Recurr. Protect. Compound.

Investor & Board Edition · 20 July 2026 · Management hypotheses, not forecasts

Deploy GoalOS as a Proof Utility

The platform is created by paid proof, not built in advance of it.

1. Near-zero-cost front door

Proof Readiness and Activation diagnose a consequential objective, expose Proof Debt and form the economic case. Price: free–$495 and $15K.

2. High-value proof

One bounded Proof Mission executes the work, captures the full denominator and returns a governed decision state. Price: $50K–$150K.

3. Recurring capability

The Proof Office keeps evidence current. Protected invocation monetizes accepted capability without surrendering the implementation.

Sell decisions and continuing control—not commodity AI documents.

The Capability–Price Lag

AI has repriced cognitive production faster than organizations have repriced cognitive work.

OLD MODE

Scarce experts
Large teams
Sequential work
Weeks or months
Static deliverable
Pricing by hours

EARLY AI MODE

Near-free candidate output
Persuasive plans and reports
Fast generation
Little authority
Weak outcome evidence
Rapid commoditization

GOALOS MODE

Bounded objective
Real execution
Evidence Docket
Independent challenge
Governed decision
Recurring control

The draft is becoming nearly free. Truth, authority, execution and accountability are not.

Sources: S1–S6. See package Source Register.

The enterprise problem

Organizations can access powerful models. They still cannot reliably authorize, prove, remember and reuse consequential machine work.

WHAT THE BUYER STILL CANNOT ANSWER

- What was the agent actually authorized to do?
- What work occurred—and what failed?
- Which evidence supports the result?
- Who challenged the claim independently?
- What may enter institutional memory?
- What may be reused, revoked or superseded?
- What value was really created?
- Did the next mission improve because of the capability?

GoalOS turns probabilistic output into an inspectable institutional decision state.

The initial ICP: AI Trust & Revenue

An AI vendor or enterprise AI team with ≥$250K of contract, deployment, capital or risk value at stake.

CONSEQUENCE

A real deployment, claim, procurement path, contract or investment.

AUTHORITY

Named sponsor with budget and acceptance rights.

DEADLINE

A decision inside 90 days.

EVIDENCE

Digital inputs and a frozen acceptance rubric.

ECONOMICS

Conservative value pool normally ≥4× first-year fee.

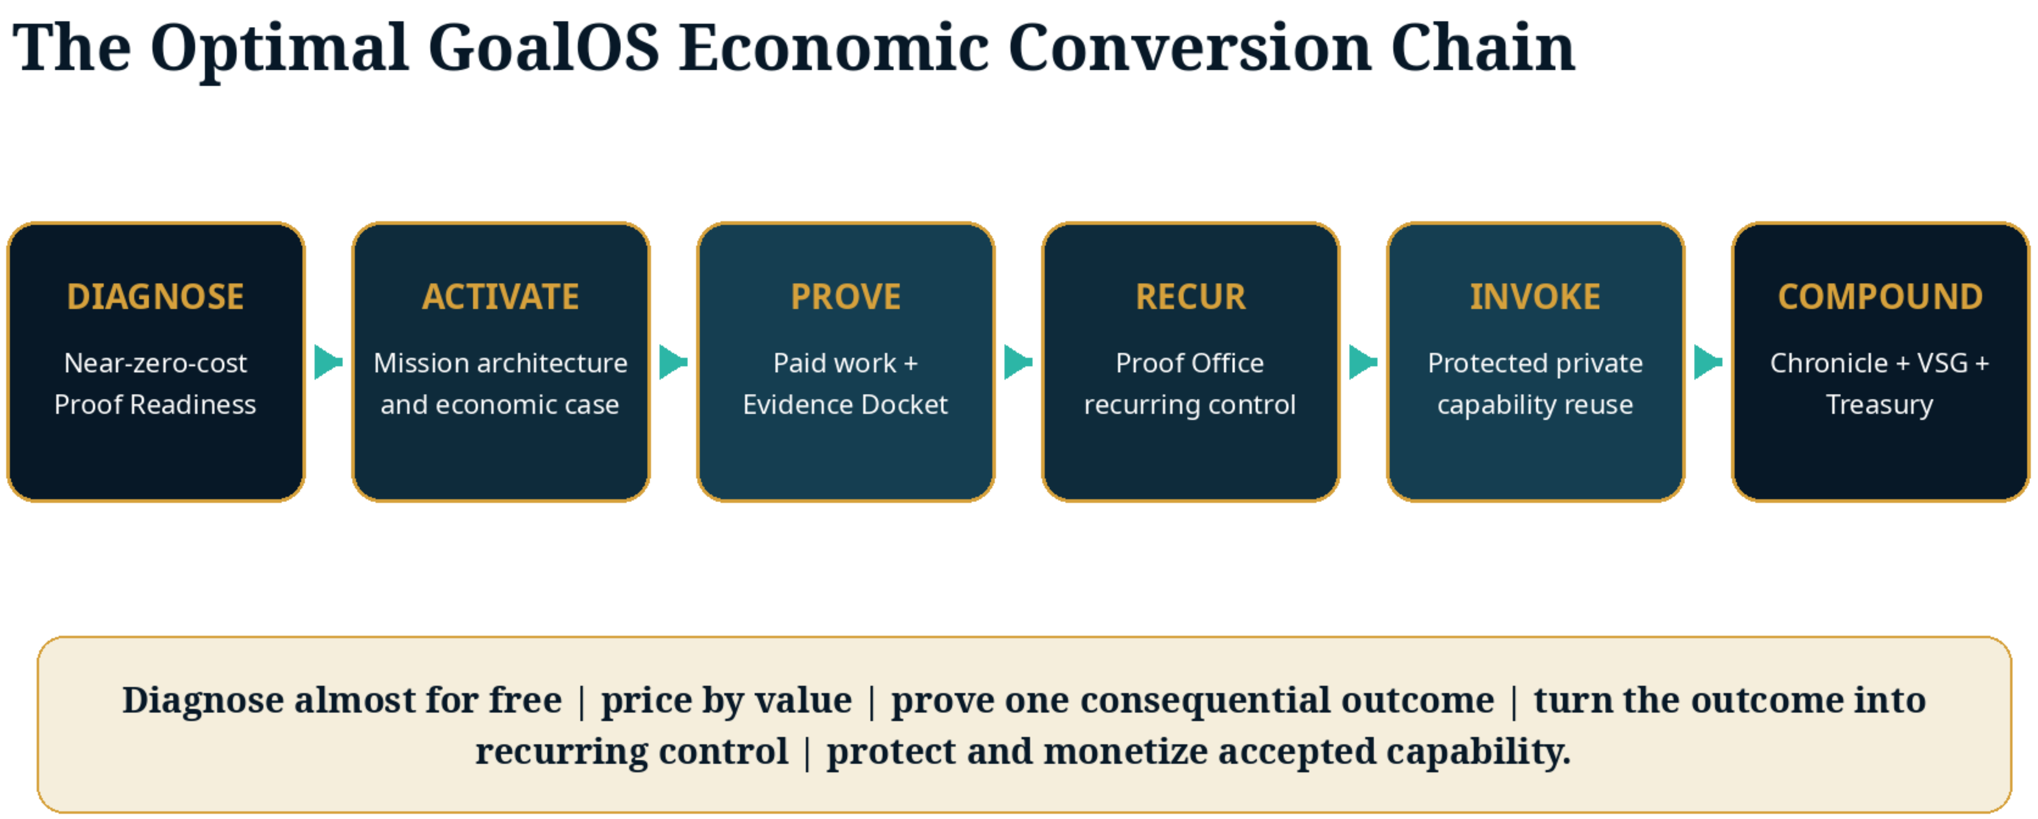
RECURRENCE

Ongoing monitoring, claims, governance, RFP or audit need.

The buyer is not purchasing a report. The buyer is purchasing a defensible decision and a path to continuing control.

The optimal economic conversion chain

One customer objective creates immediate value—and, if it passes, a reusable institutional asset.



GoalOS internal architecture.

The commercial ladder

Every stage has a distinct job: acquire, prove, retain, protect, scale.

READINESS	**Free–$495**	Acquisition and qualification
ACTIVATION	**$15K**	Near-zero-cost paid front door
PROOF MISSION	**$50K–$150K**	Creates evidence and candidate capability
PROOF OFFICE	**$15K–$50K / month**	Recurring institutional control
PRIVATE NETWORK	**$250K–$1M+ / year**	Platform, integrations and switching costs
PROTECTED INVOCATION	**Usage based**	90%+ mature gross margin
AGI JOBS / VALIDATION	**10–20% fee**	Network and settlement economics

The first mission finances capability creation. The Office monetizes control. Invocation creates software-scale economics.

Product 1 — Proof Mission Activation

The highest-margin initial product: turn one consequential objective into a funded, falsifiable mission architecture.

PRICE	MARGINAL COST	TARGET GM	DELIVERY
$15,000	**$250–$1,000**	**93–98%**	**24–72 hr**
100% prepaid	Management hypothesis	Before CAC and fixed R&D	Standard scope

DELIVERABLE

Mission Contract
Claims and assumptions matrix
Proof Debt Register
AGI Job and evidence architecture
Acceptance tests
Economic case
Proceed / narrow / repair / defer / stop path

WHY IT COMMANDS VALUE

It structures decisions involving enterprise contracts, AI deployments, procurement, investments or compliance obligations—where avoiding one mistake can be worth hundreds of thousands or millions.

Near-zero production cost does not imply near-zero customer value.

Product 2 — GoalOS Proof Mission

The customer buys a decision that is faster, inspectable, reproducible and economically accountable.

MISSION SEQUENCE

$75K
$18.75K
75%
10 days

1	2	3	4	5	6	7	8
Freeze objective	Create Proof Debt	Issue AGI Jobs	Capture evidence	Independent review	Governed decision	Candidate skill	Office plan

A reject, repair or stop decision can be successful delivery when the mission correctly retires risk or Proof Debt.

Product 3 — GoalOS Proof Office

The recurring control function that keeps the accepted decision true, current and inspectable.

BASE ARR	TARGET GM	CONVERSION	MATURE NRR
$216K	80%	40%+	120%+
US$18K/month	75–90% range	Successful missions	Target, not actual

MISSION INTAKE
New objectives and Proof Debt

EVIDENCE
Claims, sources, tests and freshness

CHRONICLE
Admit, repair, reject, supersede, retire

CAPABILITY
Versions, rights, entitlements and rollback

EXECUTIVE CONTROL
Value ledger, risk and board reporting

SUCCESSOR TESTS
Fresh comparison before improvement claims

Renewal is earned by evidence—not because another twelve months elapsed.

Protected capability invocation

Sell governed use of proven capability—never the downloadable crown-jewel implementation.

IDENTITY
Current direct agent

ENTITLEMENT
Valid, scoped, revocable

CHRONICLE
Current admission

ROOT
Latest authorized state

SCOPE
Mission-compatible

RUNTIME
Approved protected environment

RIVATE CAPABILITY EXECUTES

CUSTOMER RECEIVES

Result · evidence · version · scope · Chronicle and execution receipts

MONTREAL.AI RETAINS

Method · routing · evaluator logic · failure history · composition intelligence

The protocol may be open. The canonical private capability history remains scarce.

Architecture informed by S10–S11.

Illustrative complete-customer economics

One full first-year relationship can finance product development while giving the customer a compelling value-to-fee ratio.

FIRST-YEAR REVENUE
$331K
Activation + Mission + Office + usage

DIRECT COST
$64.95K
Full delivery denominator

GROSS PROFIT
$266.05K
Before CAC and fixed overhead

GROSS MARGIN
80.4%
Illustrative

CUSTOMER VALUE
$1.2M
Conservatively attributable management case

CUSTOMER ROI
262.5%
(Value − fee) ÷ fee

Management hypothesis—not a forecast, promise or realized result.

Price the value—not the token cost

GoalOS computes two floors and uses the higher one.

ADJUSTMENTS

VALUE FLOOR

5–15% of conservative attributable customer value.

MARGIN FLOOR

Expected variable cost ÷ (1 − required GM).

Customer-private learning

+25–50%

Sector-exclusive rights

+100–300%

Expedited delivery

+25–50%

Specialist assurance

Cost + margin

Nonstandard integration

Separate module

Discount request

Reduce scope—not margin

No value pool, no offer. No margin floor, no quote.

The zero-seller standard lane

GoalOS should be purchased through GoalOS—not through founder-dependent sales labor.

Permissioned demand → **Readiness Scan** → **Qualification** → **Fixed price** → **Deal room** → **Contract**

Payment → **Mission** → **Acceptance** → **Proof Office** → **Renewal**

AUTONOMOUS

0 routine seller-side minutes

CONSTITUTIONAL

Humans set policy and exception authority

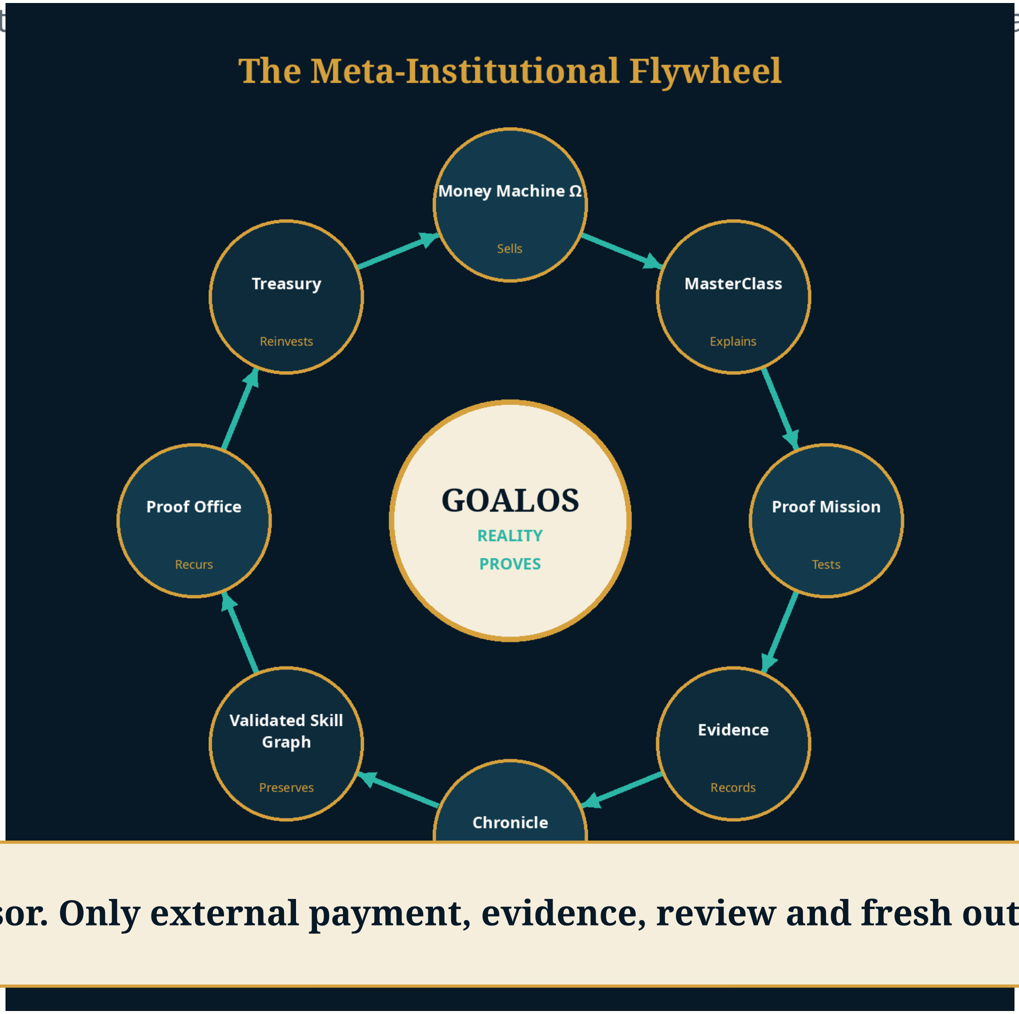
FAIL-CLOSED

Outside scope, price, rights or claims path

The customer supplies consent, objective, payment and acceptance. Reality supplies the verdict.

GoalOS is its own first customer

Commercialization, delivery, memory, int … aw.



GoalOS may build its successor. Only external payment, evidence, review and fresh outcomes may prove it is better.

The moat is the earned institutional graph

Models can be substituted. A history of proven capability, rights and customer outcomes cannot be recreated retroactively.

CUSTOMER_PAID_FOR	SPONSOR_AUTHORIZED	MISSION_DELIVERED
EVIDENCE_SUPPORTED	REVIEWER_ACCEPTED	CHRONICLE_ADMITTED
RIGHTS_PERMIT_REUSE	CUSTOMER_RENEWED	FRESH_MISSION_IMPROVED
CAPABILITY_REDUCED_COST	CAPITAL_CREATED_CAPACITY	

The nodes describe what might work. The earned edges prove what worked, for whom, under what rights and with what result.

Five-year base management case

FY1 REVENUE	FY3 REVENUE	FY5 REVENUE	FY5 EBITDA	FY5 MIX
$1.4M	$16.6M	$94.2M	$45.1M	87%
				Recurring + usage

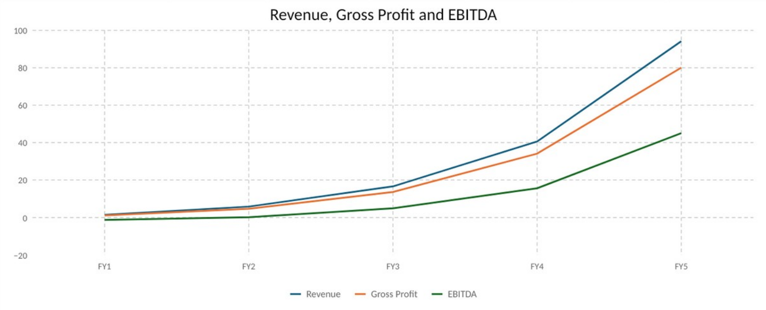
GoalOS Optimal Business Model - Financial Dashboard

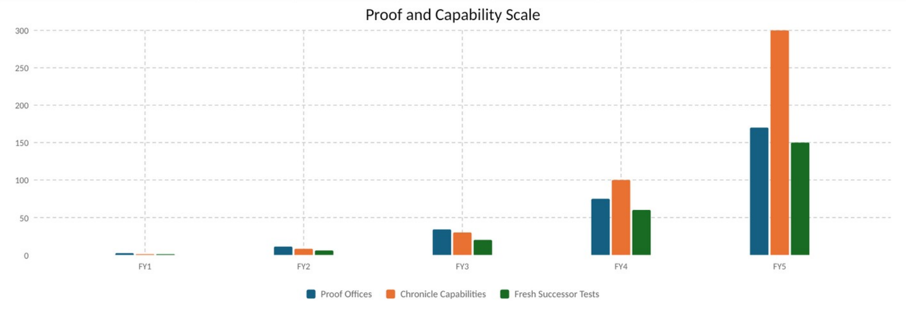
Base planning case | US$ millions unless noted | Not a forecast

FY1 Revenue	FY3 Revenue	FY5 Revenue	FY5 EBITDA	Complete Customer GM	Customer ROI
$1.4	$16.6	$94.2	$45.1	80.4%	262.5%

Base P&L ($mm)	FY1	FY2	FY3	FY4	FY5
Revenue	$1.4	$5.8	$16.6	$40.6	$94.2
Gross profit	$1.1	$4.6	$13.6	$34.1	$80.1
EBITDA	($1.3)	$0.1	$4.9	$15.6	$45.1
Ending cash	**$0.6**	**$1.3**	**$7.0**	**$15.8**	**$43.1**

Proof / Moat KPI	FY1	FY2	FY3	FY4	FY5	Why it matters
Proof Offices	2	11	34	75	170	Recurring control
Chronicle capabilities	1	8	30	100	300	Private reusable capability
Fresh successor tests	1	6	20	60	150	Measured transfer
Recurring + usage mix	38.0%	56.0%	72.0%	81.0%	87.0%	Migration to platform economics





Decision doctrine: Diagnose almost for free. Price according to value. Prove one consequential outcome. Turn the outcome into recurring control. Turn accepted experience into protected capability. Charge repeatedly for governed reuse.

Editable financial model included. Figures are management hypotheses, not forecasts.

Scenario discipline

Three cases make the assumptions explicit. None is a promise.

CONSERVATIVE	BASE	UPSIDE
$38M FY5 revenue	$94.2M FY5 revenue	$180M FY5 revenue
$11M FY5 EBITDA	$45.1M FY5 EBITDA	$100M FY5 EBITDA
Evidence grows slowly; services remain material.	Strong Office conversion and capability economics.	Rapid category adoption and high protected usage.

Update the model from receipts: actual conversion, direct cost, review burden, retention and transfer advantage.

Commercial Proof Run 001

Commercial Proof Run 001 - 90-Day Path

DAYS 0–15

Freeze

One ICP, one offer, one price, one Evidence Docket, one checkout lane.

DAYS 16–30

Launch

Permissioned demand, Readiness Scan, autonomous deal room, first paid Activation.

DAYS 31–60

Deliver

Three substantially identical missions; capture full cost, evidence and interventions.

DAYS 61–90

Compound

Independent review, first Office conversion, one admitted capability, successor test.

Gate: 3 paying customers | 1 independent review | 1 repeat or Office | positive contribution | 1 transferable

$250K envelope · 3 paying customers · 1 independent review · 1 repeat/Office · 1 transferable capability · 0 material trust breaches.

The proof ladder to platform scale

Each stage retires a different class of Proof Debt.

1. COMMERCIAL PROOF

Payment, delivery, positive

2. PRODUCT

Repeat purchase and recurring Offices

3. CAPABILITY

Fresh mission improves because of admitted skill

4. PLATFORM

Private network, identity, entitlements and usage

5. NETWORK

External agents, validators and cross-customer modules

6. CAPACITY

Verified free cash flow creates measured productive capacity

Architecture earns attention. Payment earns relevance. Outcomes earn credibility. Fresh transfer earns the platform.

What can destroy the business model

The primary risks are product sprawl, hidden human labor, weak evidence and premature platform claims.

NO PAID DEMAND

Three of thirty highly qualified prospects do not purchase the Activation.

NO RECURRENCE

Fewer than 30% of successful missions convert to continuing control.

NO TRANSFER

Validated capabilities fail to reduce cost, time, risk or reviewer burden by 15–20%.

HIDDEN SERVICES

Founder and specialist hours remain the majority of direct cost.

WEAK AUTHORITY

The same actor performs, validates and admits material work.

TRUST FAILURE

Privacy, security, evidence or authorization breach.

Fail closed. Pause expansion. Convert the failure into explicit Proof Debt and a repair mission.

THE BOARD DECISION

AUTHORIZE COMMERCIAL PROOF RUN 001

$250K · 90 days · one ICP · one offer · one price · one Evidence Docket · one recurring path

Diagnose almost for free.

Price according to value.

Prove one consequential outcome.

Turn the outcome into recurring control.

Turn accepted experience into protected capability.

Charge repeatedly for governed reuse.

Proof Activations create demand. Proof Missions create evidence. Proof Offices create recurring revenue. Chronicle creates authority. The Validated Skill Graph creates the moat.
