

GoalOS Autonomous Money Machine Ω Frontier AI MasterClass

90-Day Commercialization Plan

North-star result

By day 90, GoalOS should have **one completed paid Proof-to-Revenue Run**, an independent reviewer verdict, a public-safe Evidence Docket where authorized, one candidate Validated Skill, a Mission 2 comparison under equal constraints, and a follow-on commercial decision.

Operating targets

- 25 carefully selected target accounts
- 15 substantive executive discovery conversations
- 8 qualified opportunities
- 3 paid private MasterClasses
- 2 paid Money Machine Design Labs
- 1 paid Proof-to-Revenue Run
- 3 independent reviewers onboarded
- 1 Mission 2 reuse test
- 1 enterprise expansion proposal

These are operating targets, not forecasts or guaranteed outcomes.

Days 1–10: Freeze the commercial unit

Decide

- One first market and use case
- One economic buyer and executive sponsor
- One flagship promise
- One public price anchor
- One proof level
- One standard day-one sequence
- One Docket and reviewer standard
- One Mission 2 success and falsification test

Produce

- Target-account list
- Qualification scorecard
- Sales one-pager
- Executive outreach
- Proposal and statement-of-work structure

- Reviewer agreements and conflict checks
- Mutual NDA and customer-data boundary with counsel
- Redacted sample Docket

Gate

Do not begin mass outreach until the offer, claim boundary, payment terms, and completion standard are consistent across all materials.

Days 11–30: Sell paid discovery

Weekly cadence

Monday: pipeline review, account selection, owner and next action.

Tuesday–Thursday: discovery, introductions, briefings, and proposals.

Friday: objection analysis, delivery review, pricing evidence, and next-week commitments.

Discovery questions

1. What decision must be made?
2. Why is it economically consequential?
3. What happens if the organization is wrong or late?
4. Who owns the decision and budget?
5. What is the deadline?
6. How is the decision handled today?
7. Which claims remain unsupported?
8. Who reviews the evidence?
9. What information must remain private?
10. Could the method be reused across a team, portfolio, or enterprise?

Gate

A prospect does not receive a Proof-to-Revenue proposal without a named sponsor, real objective, decision deadline, evidence access, reviewer route, and plausible budget.

Days 31–60: Deliver and convert

Deliver the three paid MasterClasses

For each session, complete:

- Commercial Objective Brief
- Buyer and purchase trigger

- Offer ladder and price hypothesis
- Funnel and capacity model
- Human approval map
- Mission Contract
- Proof Debt Register
- Custom Job Queue
- Evidence Docket blueprint
- Chronicle Admission Test
- Validated Skill hypothesis
- Mission 2 metric
- Named next owner and decision date

Convert two opportunities to a Design Lab

The Design Lab freezes the buyer, claim set, proof level, jobs, reviewers, Docket index, acceptance tests, commercial terms, publication boundary, and Proof-to-Revenue Run SOW.

Gate

Do not promise a positive verdict. Payment purchases disciplined work and inspectable artifacts—not approval.

Days 61–90: Produce the first undeniable proof

Mission 1

- Freeze baselines and success criteria before execution
- Run bounded proof jobs
- Preserve provenance, logs, artifacts, costs, and risks
- Obtain an external reviewer verdict
- Admit a skill only if the Chronicle gate passes
- Preserve dissent and unresolved Proof Debt

Mission 2

- Hold objective class, tools, constraints, proof level, and evaluator rules constant
- Compare quality, speed, cost, risk, replay, and reviewer burden
- Recheck freshness, scope, privacy, and independence
- Reject the compounding claim if improvement disappears under control

Commercial close

Ask for one of three decisions:

1. Follow-on Proof Mission
2. Enterprise Proof OS pilot
3. Stop / repair with preserved evidence

Scoreboard

Layer	Metric
Demand	Paid engagements, conversion rate, cycle length
Delivery	Artifact completion, time to sponsor-ready state
Proof	Proof Debt retired, provenance, replay, reviewer agreement
Trust	External verdicts, false admission, disputes, rollback
Economics	Revenue, collection, direct cost, gross margin, utilization
Compounding	Skill reuse, Mission 2 lift, scope violations, reviewer burden
Expansion	Follow-on purchase, department/portfolio adoption, recurring revenue

Claim boundary

The 90-day program tests commercial demand and proof-producing delivery. It does not establish achieved AGI/ASI, guaranteed revenue, legal or security certification, or universal capability compounding. Stronger claims require real tasks, evidence, replay, external review, and measured outcomes.
