

GoalOS Autonomous Money Machine Ω

Machine Ω Frontier AI MasterClass

Design-Partner and Proof-to-Revenue Qualification Scorecard

Not money by magic. A proof-governed productive-capacity flywheel.

No hype. Only proof. Only customer value.

How to Score

Score each criterion from 0 to 5. Multiply by the weight. Use evidence, not enthusiasm. A high score cannot override a missing sponsor, unacceptable data boundary, or prohibited use.

Criterion	Weight	0	3	5
Decision impact	20	Curiosity	Material department decision	Enterprise / board-level value or risk
Sponsor authority	15	No owner	Influencer or functional owner	Named budget and decision authority
Urgency	15	No date	Inside 6 months	Inside 90 days
Proof burden	15	Low consequence	Material claims and review	Evidence, privacy, security, or regulatory complexity
Data and access	10	No access	Partial access	Relevant data and stakeholders available
Reviewer path	10	None	Internal reviewer	Credible independent or multi-party route
Reuse potential	10	One-off	Related use cases	Portfolio / enterprise repeatability
Budget	5	No budget	Exploratory budget	Can fund premium mission work

Decision Rules

- Below 50: reading, public education, or no action.
- 50–69: discovery or Frontier Executive Briefing.
- 70–79: Money Machine Design Lab eligible.
- 80+ with sponsor and deadline: Revenue Institution Sprint or Proof-to-Revenue Run eligible.
- Repeated demand across teams: enterprise-program candidate.

Hard Stops

- Illegal, deceptive, harmful, or prohibited use.
- Demand for fabricated customers, testimonials, benchmarks, or results.
- No human decision authority for irreversible actions.
- Unacceptable privacy, security, or data conditions.
- Expectation of guaranteed revenue or a pre-decided positive verdict.
- No ability to access the evidence needed for the material claim.

Source Lineage and Claim Boundary

- GoalOS Autonomous Money Machine Ω standalone application and release notes.
- GoalOS: Proof-Carrying Autonomy — canonical proof-to-capability operating system.
- GoalOS Mission OS — commercial proof-to-action product layer.
- GoalOS: The Validated Skill Graph — Chronicle-gated reusable capability.
- AEP-001 — proof, evaluation, propagation, and rollback doctrine.
- AGI ALPHA — organizational substrate and verified-work compounding thesis.

Claim boundary

This program teaches and applies a research architecture, commercial operating method, and product pathway. It does not guarantee revenue, certify a system, replace legal, security, financial, medical, regulatory, or domain review, authorize production deployment, or claim achieved AGI or superintelligence. Forecasts are scenarios. Strong claims require real customers, real tasks, Evidence Dockets, baselines, replay, cost and safety ledgers, external validation, delayed outcomes, and independent review.
