

WORKBOOK

The institution for proof-carrying intelligence

Enter with one consequential objective.

Leave with a governed partner charter.

Use this workbook to design a bounded Proof Mission, retire Proof Debt, create a reviewer-ready Evidence Docket, govern recursive self-improvement, and define the first measurable test of capability compounding.

Organization

Participant

Role

Date

Claim boundary. This workbook supports an architecture and local/reference exercises. It does not establish achieved AGI/ASI, external validation, production authorization, live settlement, legal certification, token valuation, or guaranteed results.

ORIENTATION

Masterclass outcome map

1 Objective

2 Mission Contract

3 Proof Debt

4 AGI Jobs

5 ProofBundles

6 Evidence Docket

7 Validation

8 Chronicle + Skill

9 Root + Mission 2

By the end, I can...

- ☐ Distinguish candidate output from justified authority.
- ☐ Freeze scope, proof level, validators, blocked claims, and rollback before work begins.
- ☐ Turn unsupported claims into explicit Proof Debt.
- ☐ Design proof-producing AGI Jobs with acceptance tests.
- ☐ Explain what belongs in a ProofBundle and Evidence Docket.
- ☐ Use Chronicle as the memory firewall.
- ☐ Explain commitment versus authority in a Merkle proof.
- ☐ Govern RSI with ECI, baselines, replay, stress persistence, and drift control.
- ☐ Design Mission 2 as a controlled test of reusable lift.
- ☐ Propose a 30-60-90 partner engagement around one real proof mission.

OBJECTIVE

The consequential decision canvas

Start with the decision—not the model, tool, or desired answer.

What decision must be made?

Why does it matter now?

Who owns the decision?

Who bears the downside if it is wrong?

What action could follow?

What would make the decision reversible?

AUTHORITY-BEARING OBJECT

Mission Contract

Freeze the burden of proof before results are visible.

Objective statement

Decision to support

Success criteria

Failure criteria

Constraints and allowed tools/data

Blocked tools/data/actions

Required validators and independence

Rollback obligations and done condition

Risk class

Proof level

Time / budget limit

AUTHORITY CALIBRATION

Proof-level selection

Higher requested authority requires a higher evidence burden.

Level	Required posture	Memory effect	Choose / reason
L1 Structural	Schema coherence and explicit Proof Debt	No durable influence	
L2 Internal	Internal review, scope, obvious safety	Temporary labeled reuse	
L3 External	Independent review / replay path / provenance	Scoped reusable skill	
L4 Handoff	Validated evidence and external execution boundary	Preparation for external action	
L5 Formal	Multi-validator, baseline, replay, risk, challenge, rollback	Durable future influence	

CLAIM BOUNDARY

Claims matrix

Every consequential assertion receives an explicit support state.

Claim ID	Material claim	Impact	Support state	Evidence / gap	Scope / blocked extension

UNCERTAINTY → WORK

Proof Debt register

The score prioritizes work; it is not truth or authority.

Debt ID	Claim	Why proof is needed	Impact	Unsupported	Irreversibility	Reuse risk	Priority / retirement condition

Priority metadata = Impact × Unsupported × Irreversibility × Reuse Risk

PROOF-PRODUCING WORK

Custom AGI Job contract

Job ID	Source Proof Debt
Claim and why needed	Worker and validator requirements
Inputs, environment, and tool policy	Deliverables and acceptance tests
Blocked claims and failure policy	ProofBundle path, budget, deadline, rollback

A job without evidence acceptance tests is a wish—not a proof job.

MISSION WORKBENCH

AGI Job portfolio

The workbench begins empty and creates only mission-specific proof work.

Job	Proof Debt	Worker	Validator	Evidence produced	Acceptance tests	Status

EVIDENCE FROM EXECUTION

ProofBundle inspection

A ProofBundle may prove failure. Preserve it.

Input root and environment root

Output root and artifact manifest

Tool decisions and trace root

Acceptance-test results

Failures and negative evidence

Cost, latency, and resource use

Replay manifest

Rollback notes and signatures

THE PROOF ROOM

Evidence Docket architecture

A reviewer should understand the decision without reading every raw trace.

Mission Contract and decision question

Claims matrix and Proof Debt snapshot

ProofBundle manifest and provenance

Contradiction register and uncertainty

Replay / audit path

Cost and risk ledgers

Privacy boundary and public-safe projection

Blocked claims, Chronicle recommendation, rollback

EVIDENCE DOCKET QA

Reviewer reconstruction test

If these answers are difficult, the Docket is not reviewer-ready.

What was attempted and under which contract?

What happened?

What evidence exists?

What failed or contradicted the preferred conclusion?

What remains uncertain or blocked?

What can be replayed?

What passed validation?

What may be reused—and under what scope?

What must not be claimed?

VALIDATION IS ROUTED

Verifier Mesh design

Different claims require different validators. Distinct names do not guarantee effective independence.

Claim / artifact	Validator type	Acceptance rubric	Independence attributes	Conflict disclosure	Replay / delayed outcome	Verdict

MEMORY FIREWALL

Chronicle decision

Nothing enters memory because it sounds useful.

☐ REPAIR	☐ REJECT_OUTCOME_PRESERVE_EVIDENCE
☐ PASS_NO_DURABLE_MEMORY	☐ ADMIT_WITH_SCOPE
☐ QUARANTINE	☐ SUPERSEDE
☐ REVOKE	☐ RETIRE

Decision reason

Allowed scope and excluded scope

Future influence and freshness policy

Monitoring, challenge finality, and rollback

GOVERNED REUSABLE CAPABILITY

Validated Skill Passport

The durable asset is not a prompt fragment. It is scoped, evidenced, versioned, and rollbackable.

Skill ID / version

Name / type

Allowed scope and excluded uses

Assumptions and method

Evidence, ProofBundles, and tests

Validators, replay, and proof level

Risk, failure modes, freshness

Rollback, revocation, lineage, utility

MEMORY WITHOUT BLOAT

Worth-keeping review

Chronicle admission says a skill may be reused. Retention policy decides whether it should remain durable memory.

Dimension	Expected value / burden	Evidence	Decision

Suggested dimensions: quality improvement, time reduction, cost reduction, risk reduction, expected reuse, teaching value, packaging value, maintenance cost, drift risk, governance cost.

COMMITMENT $\neq$ AUTHORITY

Merkle proof interpretation

Chronicle decides authority. The root commits state.

What the proof establishes

Membership, canonical state, tree policy, continuity

What it does not establish

Truth, safety, legality, quality, freshness, review, authorization

RECURSIVE SELF-IMPROVEMENT

RSI candidate card

Exploration is allowed. Outcome authority is mechanical.

Candidate / version

Target component

Hypothesis and expected mechanism

Baseline set and equal constraints

Novelty distance and Advantage Delta

ECI level and executed evidence

Risk tier, prohibited-domain checks, side effects

Replay, stress persistence, scope, rollback

TARGET → PROMOTE

RSI deterministic cycle

Stage	Purpose	Input / artifact	Gate / failure	Owner

Stages: TARGET, EMIT, FILTER, ATLAS, TEST-PLAN, EVAL, INSERT, PROMOTE. OMNI may influence TARGET/FILTER allocation; it never controls INSERT or PROMOTE.

HIGH NOVELTY → HIGHER SKEPTICISM

Move-37 and drift checklist

Move-37

- ☐ Novelty and advantage thresholds recorded
- ☐ Candidate and baselines reproduced under fixed seeds
- ☐ Policy shocks and adversarial probes executed
- ☐ Positive advantage persists under required shocks
- ☐ Side effects and nearby baselines inspected
- ☐ Dossier contains replay, evidence, risk, and governance
- ☐ No narrative-only breakthrough claim

Drift sentinel

- ☐ Prompt pack hash verified
- ☐ Runner configuration hash verified
- ☐ State payload hash verified
- ☐ Cycle increments exactly +1
- ☐ Archive / scaffolds / atlas / ECI do not silently shrink
- ☐ Schema and scoring changes are authorized
- ☐ Hard failure leaves state unchanged

FIRST EVIDENCE OF COMPOUNDING

Mission 2 experimental design

Mission 1 usefulness is not capability compounding. Mission 2 must show measured lift under equal constraints.

Fresh held-out task family

Equal constraints: model, tools, budget, seeds, evaluation, stopping

Fresh Control arm

Raw Memory arm

Validated Skill arm

Ungated rejected-candidate ablation

Metrics: quality, cost, latency, risk, reviewer burden, replay

Preregistered pass / fail / falsification criteria

EVIDENCE-PRODUCING COLLABORATION

Partner 30-60-90 plan

0-30 · Founding Proof Mission Objective, artifacts, reviewer, Docket, decision state Partner owner	31-60 · Matched Mission 2 Fresh tasks, baselines, replay, measured lift GoalOS owner	61-90 · Operating lane Chronicle, root, challenge, rollback, portfolio scorecard Designated reviewer
--	--	--

JUDGE BY EVIDENCE

Partner scorecard

Recommended metrics: decision readiness, claim support, contradiction coverage, Proof Debt reduction, replay, reviewer burden, residual risk, cost, latency, second-mission lift.

Metric	Baseline	Target	Observed	Evidence ref	Decision / next proof

PRESSURE TEST

Objection and diligence room

A strong answer narrows claims and names the next evidence gate.

Question / objection	Evidence-based answer	What remains unproven	Next proof

NOW WE PROVE IT

Commitment page

Expansion follows evidence—not enthusiasm.

One decision that matters.
One designated reviewer.
One measurable second mission.

The decision we will prove

The evidence and artifacts we will supply

The reviewer and authority boundary

The first success, stop, and rollback conditions

The capability we may preserve

How Mission 2 will test it

Partner signature / date

GoalOS lead / date

Reviewer acknowledgement

EXECUTIVE DECISION ROOM

Board-level decision brief

Compress the entire mission into what the board must know, decide, refuse, and require next.

Decision requested

Recommended posture: proceed / repair / hold / reject

Three strongest evidence points

Three material uncertainties or contradictions

Conditions before action

Rollback, monitoring, and challenge trigger

MISSION ECONOMICS

Mission value and proof burden

Use quantitative estimates as discussion aids, never as substitutes for evidence or judgment.

Mission Value = (Decision Impact × Proof Integrity × Actionability × Reuse) ÷ (Cost + Risk + Latency + Proof Debt)

Dimension	Baseline	Target	Evidence / assumption	Owner
Decision impact				
Proof integrity				
Actionability				
Reuse potential				
Cost / latency				
Residual risk / debt				

Economic decision and evidence required

ARCHITECT / VALIDATOR COUNCIL

Five-role council memorandum

Each role has a distinct responsibility. Consensus does not erase dissent.

MISSION ARCHITECT

What must be frozen?

EVIDENCE MARSHAL

What proof is missing?

CHRONICLE GOVERNOR

What may enter memory?

RSI DIRECTOR

What must Mission 2 test?

PARTNER PRINCIPAL

What engagement is justified?

CONSENSUS + DISSENT

Proceed only if...

STRESS THEATRE

Challenge, containment, and rollback exercise

Choose the failure your board fears most. Describe how the institution must respond without granting unsupported authority.

Failure event**TRIGGER****DETECT****CONTAIN****DECIDE****MEMORY****ECONOMY****Challenge grounds and evidence****Appeal / finality path****Rollback target****Future-mission warning or restriction**

VALIDATOR INDEPENDENCE

Effective-control committee design

Identity count is not independence. Record correlated control explicitly.

Validator	Operator / wallet	Model / cloud	Region / jurisdiction	Conflict	Replay capability	Eligible?

Minimum independence policy

Commit-reveal and challenge policy

GOVERNED RSI FRONTIER

Recursive improvement mandate

Exploration is allowed. Outcome authority is mechanical.

Improvement target

Constitutional invariants that may not weaken

Incumbent / neighbor / null baselines

Executed evidence and ECI requirement

Stress and persistence policy

Canary, monitoring, challenge, rollback

TARGET Allocation only	EMIT Candidate generation	FILTER Risk + interestingness	ATLAS Mechanisms + contradictions	TEST-PLAN Falsification ladder
EVAL Executed comparison	INSERT Append-only archive	PROMOTE Dossier + gate	DRIFT Hard fail if silent	MISSION 2 Fresh transfer test

MOVE-37 DOSSIER

Breakthrough audit packet

High novelty raises skepticism. A breakthrough is a state transition, not a story.

Dossier field	Required content	Evidence reference	Reviewer verdict
Recognition thresholds			
Baseline comparison			
Reproduction manifest			
Policy-shock stress			
Persistence result			
Risk / side effects			
ProofBundles / ECI			
Scope / excluded uses			
Canary / monitoring			
Rollback / challenge			

DILIGENCE MATURITY

Evidence-status matrix

A high-caliber partner should know exactly what is specified, implemented, local, pending, gated, or unproven.

Evidence that exists now

External gates required next

Claims explicitly prohibited today

What would falsify the thesis

DATA ROOM

Partner evidence request index

Agree on what the partner may inspect, what remains private, and what proof is sufficient for the selected level.

Artifact requested	Public / private	Owner	Access method	Due	Status / gap

PARTNER CHARTER

Founding Proof Mission charter

Expansion follows evidence—not enthusiasm.

Partner and engagement mode

Decision and initial window

Mission 1 deliverables

Mission 2 comparison

Partner responsibilities

GoalOS responsibilities

Reviewer authority

Privacy, public proof, and claim boundary

Kill criteria

Expansion gates

BOARD MEMO

One-page recommendation

Proceed to a bounded Proof Mission only when the conditions below are satisfied.

Strategic rationale

Evidence-backed recommendation

Conditions precedent

Risk ownership and rollback

What remains explicitly unproven

Decision requested today

NOW WE PROVE IT

Founding commitment

Name the decision.
Nominate the reviewer.
Reserve Mission 2.

GoalOS will freeze the contract, expose the Proof Debt, create the proof work, build the Evidence Docket, govern memory, commit accepted state, and test whether capability actually improves fresh work.

Partner representative / date

GoalOS lead / date

Reviewer acknowledgement / date

Claim boundary. No achieved AGI/ASI, external validation, production authorization, live Mainnet settlement, validator independence, legal certification, token valuation, or general capability compounding is represented without the corresponding evidence.
