

MONTREAL.AI

GOALOS

EXECUTIVE DECISION BRIEF

Build the institution that converts intelligence into compounding productive power.

GO — AT CATEGORY-DEFINING SCALE

Maximum ambition. Minimum unsupported claim. No skipped gates.

EXECUTION COMMAND

Commercial Proof Run ooi

The 90-day command that turns the institution from architecture into customer-backed authority.

Command intent

MISSION

Prove one premium GoalOS product with three unrelated customers, one repeated delivery path, one independent verdict, one recurring expansion, one transferable capability and zero material trust breaches.

The frozen commercial wedge

Element	Frozen decision
Ideal buyer	Board, CEO, CIO, CISO, AI leader, investor or strategic buyer facing a consequential AI decision
Customer question	Should we deploy, acquire, scale, continue funding, narrow, repair or stop this AI initiative?
Product	GoalOS Enterprise Proof Mission
Founding price	\$250,000 standard; scope may be reduced rather than price discounted
Delivery window	15 business days after data readiness
Output	Mission Contract, Proof Debt, AGI Jobs, Evidence Docket, independent verdict, governed decision and action plan
Expansion	GoalOS Proof Office at \$1,000,000 per year
Rights	Network-admissible base; customer-private and exclusive rights priced at a premium

Days 1-14 - freeze and activate

- Ratify the Charter of Productive Intelligence and the public claim boundary.
- Freeze one customer profile, one decision question, one price, one scope, one Evidence Docket and one acceptance path.
- Configure the autonomous deal room, contract library, payment path, data boundary and consent ledger.
- Recruit at least two independent reviewers with no economic incentive to issue PASS.
- Construct the first 60-account list and launch the permissioned MasterClass / briefing sequence.
- Run an internal GoalOS Sells GoalOS rehearsal with complete cost and intervention capture.

Days 15-45 - close and execute

- Close three unrelated paying customers under substantially identical terms.
- Collect 50% at signature, 30% at frozen Evidence Docket and 20% at defined acceptance or terminal decision.
- Execute real AGI Jobs with observable tools, budgets, deadlines, evidence and recovery states.
- Record every retry, failure, human intervention, external cost and unsupported claim.
- Publish no customer claim before customer authorization and independent review.

Days 46-75 - verify and productize

- Deliver three Evidence Dockets and at least one independently reviewed verdict.
- Identify one repeated method that qualifies as a candidate Validated Skill.
- Freeze a fresh successor test before the candidate is permitted to influence the new mission.
- Convert accepted customers into evidence-based Proof Office proposals.
- Measure contribution margin, customer value, reviewer burden, replay and founder intervention.

Days 76-90 - admit, repeat or stop

- Issue Chronicle decisions: admit, condition, repair, reject, quarantine, supersede or retire.
- Run the fresh Generation 2 comparison and independent review.
- Activate at least one recurring Proof Office or repeat mission.
- Publish one public-safe customer-authorized Proof Docket.
- Authorize the next capital gate only if commercial, trust, capability and economics thresholds pass.

Command dashboard

Gate	Target	Stop / repair condition
Paying customers	3	Fewer than 3 after 60 qualified accounts and 90 days
Mission repeatability	3 similar missions	Delivery remains materially bespoke or founder-dependent
Independent authority	At least 1 reviewed outcome	No separated reviewer route or incomplete evidence
Retention	At least 1 repeat / expansion	No customer continues after accepted delivery
Contribution	Positive	Variable cost, refund, support or claims burden destroys margin
Capability	At least 1 rights-cleared skill	No fresh transfer or rights block reuse
Successor	At least 1 measured improvement	No preregistered metric improves under equal or harder constraints
Trust	0 material breaches	Security, privacy, claim or authorization incident

Capital ceiling

Use	90-day ceiling
Product and autonomous commercial lane	\$100,000
Evidence, evaluator and specialist operations	\$50,000
Security, legal, privacy and contracts	\$50,000
Category launch and qualified demand	\$35,000
Contingency	\$15,000
Total	\$250,000

FINANCING LAW

No capital is released to the next stage merely because the architecture is attractive. Each tranche retires a distinct class of Proof Debt.

The final command

Build the category now. Sell the bounded mission now. Publish the evidence. Compound only what passes.

Selected sources and evidence boundary

External sources establish the timing context. GoalOS pricing, revenue, ROI, financing, valuation and capacity scenarios are management hypotheses until verified by customer and operating evidence.

CLAIM BOUNDARY

This document does not claim achieved general intelligence, unrestricted recursive improvement, guaranteed customer outcomes, legal certification, audited forecasts, or a present enterprise valuation. The governing doctrine is maximum ambition with minimum unsupported claim.
