

GoalOS Executive Value Brief Ω

Three Use Cases Where Proof-Governed Intelligence Can Rationally Outperform Its Price

GoalOS delivers strong value when a consequential objective has a real sponsor, budget, deadline, proof burden and economic cost of error.

DECISIONS AT STAKE	EXTERNAL FEES	GROSS MODELED VALUE	PORTFOLIO ROI
\$37.05M	\$325K	\$2.82M	562%

Illustrative modeled economics - not realized customer outcomes, forecasts or guarantees. Release 1.0.0 | 18 July 2026 | MONTREAL.AI

Executive Verdict

GoalOS can provide excellent value when the buyer has a consequential objective with a real sponsor, approved budget, hard deadline, frozen proof burden and measurable economic cost of error. The system is least valuable when it is purchased as generic “AI transformation” without a decision owner or an evidence standard.

Decisions at stake	Total investment	Gross value	Net value	Portfolio ROI			
\$37.05M	\$425K	\$2.82M	\$2.39M	562%			
Use case	Sponsor	Deadline	External fee	Gross value	Net value	ROI	Value / fee
AI deployment	CIO / CISO / BU President	15 business days	\$75K	\$801K	\$701K	701%	10.7x
Capital allocation	CEO / CFO / Board	21 calendar days	\$150K	\$1.55M	\$1.35M	677%	10.4x
Commercial proof run	CEO / CRO / Venture	60 days	\$100K	\$461K	\$336K	269%	4.6x

The Three Best Use Cases

01 - Enterprise AI Deployment Decision Assurance

Sponsor: CIO / CISO / Business President | Deadline: 15 business days | A single bad deployment can destroy far more value than the diligence mission costs. The modeled case reaches break-even if GoalOS reduces the probability of a material error by only 3.1 percentage points, before counting acceleration, labor savings or reuse.

02 - Board-Level Capital Allocation and Acquisition Diligence

Sponsor: CEO / CFO / Board Sponsor | Deadline: 21 calendar days | For a board-level allocation, the price of certainty is not the engagement fee. It is the difference between a well-evidenced decision and a materially impaired investment. The modeled case needs only a 2.5 percentage-point risk reduction to cover the full investment.

03 - Three-Customer Commercial Proof Run

Sponsor: CEO / CRO / Venture Lead | Deadline: 60 days | The commercial proof run creates value in either direction. A passing run produces paid evidence and a repeatable offer. A failing run can preserve capital by stopping an unproven thesis before another four months of modeled GTM burn.

The Value Qualification Rule

Sponsor	Named executive with authority to act.
Budget	Approved before mission formation.
Deadline	Real gate within 60 days.
Proof burden	Material claims, tests, reviewers and acceptance criteria.
Cost of error	At least 5x the external fee; 10x+ preferred.
Decision discipline	Customer accepts CONDITION, REPAIR, REJECT, PIVOT or STOP.

Corporate conclusion

GoalOS should be priced against the economic value of the decision it protects or accelerates - not against token count, seat count, document volume or agent count.

Immediate Next Step

1. Select one live objective with a named sponsor and decision date.
2. Freeze the Mission Contract and conservative cost-of-error model.
3. Replace the workbook assumptions with sponsor data.
4. Approve the evidence plan and independent reviewers.
5. Run the mission and publish only what the resulting Evidence Docket supports.
