

Executive proposition

Tell us the consequential objective. GoalOS will expose what must be proven, coordinate the necessary work, show what passed or failed, and return an inspectable decision state.

The buyer problem

Enterprise teams are often asked to deploy, purchase, scale or continue funding AI systems before the evidence is decision-ready. Model output, vendor claims and internal enthusiasm are abundant; inspectable support, replayable tests, permission boundaries, rollback and accountable authority are scarce.

What GoalOS does

Objective → Mission Contract → Proof Debt → Custom AGI Jobs → ProofBundles → Evidence Docket → Independent verdict → Governed decision → Action and rollback plan

What the sponsor receives

Deliverable	Decision value
Mission Contract	Freezes objective, scope, deadline, authority and acceptance tests.
Proof Debt Register	Shows exactly what remains unproven.
Custom AGI Jobs	Creates only the bounded work required to resolve the debt.
Evidence Docket	Aggregates tests, artifacts, sources, contradictions, costs and uncertainty.
Governed decision state	PROCEED, CONDITION, REPAIR, NARROW, PIVOT, REJECT, QUARANTINE or STOP.
Action and rollback plan	Specifies who may act, under what conditions, and how to reverse course.

Best fit

- A real executive sponsor and hard decision date.
- Meaningful cost of error or delay.
- Conflicting or incomplete AI claims.
- Willingness to accept a conditional or negative decision.
- Access to the data, systems and reviewers required for proof.

Founding engagement hypothesis

Scope	One consequential AI decision
Founding price	US\$15,000
Typical delivery	10 business days
Expansion	Second Proof Mission or recurring GoalOS Proof Office
Claim boundary	No guaranteed favorable outcome; proof may require repair, narrowing or stop

Not merely work completed. Capability earned. Improvement proven.
