RE: Launch GoalOS as the proof-governed intelligence institution

Decision

RECOMMENDATION: GO. Launch now at category-defining scale, while binding valuation, value and platform claims to explicit commercial proof gates.

Rationale

- The market is moving from direct model deployment toward agents, evaluations, governance, institutional memory and protected execution.
- MONTREAL.AI has a coherent technical and commercial architecture spanning Mission Contracts, AGI Jobs, Evidence Dockets, Chronicle, a Validated Skill Graph, direct agent identity and a protected capability network.
- The company can enter through a bounded high-value service and evolve toward recurring Proof Offices and enterprise platform economics.
- The architecture is compatible with open standards while the canonical private capability network compounds as the scarce asset.

Approved 100-day mandate

Gate	Target
Paying customers	3 unrelated enterprises
Delivered missions	3 substantially identical bounded missions
Verified outcome	At least 1 independently supported
Repeat purchase	At least 1
Attributable contribution	Positive
Public-safe case	At least 1 with customer permission
Chronicle transfer	1 capability tested on a fresh mission
Trust breaches	0

Approved launch architecture

- GoalOS as the category and operating system.
- Enterprise AI Proof Mission as the first purchasable outcome.
- Frontier MasterClass and Autonomous Money Machine Ω as demand and commercial-formation engines.
- Proof Office as recurring revenue.
- Private Capability Network and *.agent.agi.eth as the long-term identity, entitlement and invocation moat.
- GoalOS Treasury as a future proof-gated capital allocator after verified free cash flow exists.

Conditions and reservations

- No achieved-AGI, guaranteed-outcome, valuation or investment-return claim.
- No platform claim before fresh capability transfer.
- No infrastructure-scale claim before measured productive output.
- Independent review authority separated from principal delivery.

- No material customer data or private capability outside authorized boundaries.
- Capital released in tranches against proof gates.

Board resolution

Resolved: MONTREAL.AI is authorized to launch GoalOS under the 100-day Commercial Proof Run 001 mandate, to appoint the accountable officers, approve the bounded budget, enter founding customer engagements, and publish evidence only within the approved claim boundary.
