

GoalOS

The Proof OS for Autonomous AI Work

Turn one consequential objective into an inspectable, challengeable and reusable Governed Decision State.

Vincent Boucher | GoalOS / AGI ALPHA Research Architecture
July 2026 | Final Production Partner Edition

CORE LAW

**AI creates output.
GoalOS creates
proof.**

A model may answer. An agent may act.
An institution must prove.

**No proof, no evolution. No evaluation, no
propagation. No rollback, no release.**

AI output is abundant. Institutional authority is scarce.

The missing layer is evidence, contradiction handling, accountable memory and rollback.

Report-only AI

- Output is the endpoint**
Reviewers reconstruct evidence and assumptions manually.
- Contradictions disappear**
Conflicting facts are averaged into confident prose.
- Memory is permissive**
Persuasive text can become an institutional prior.
- Rollback is ad hoc**
No native record of what granted authority.

GoalOS

- ✓ Decision state is the endpoint**
Claims, evidence, risk, action and rollback travel together.
- ✓ Proof Debt is explicit**
Unsupported claims become visible work or remain blocked.
- ✓ Chronicle gates memory**
Only admitted, scoped and replayable capability propagates.
- ✓ Authority is inspectable**
Proof, validation, challenge and scope are recorded.

THE GAP

Fluency is not authority.

Institutions need a machine-checkable path from objective to evidence, from evidence to decision, and from accepted decision to reusable capability.

GoalOS supplies that proof operating layer.

One objective becomes a Governed Decision State.

The deliverable can be inspected, challenged, acted on, replayed and rolled back.

A boardroom-ready, offline demonstration.

Run a mission, inspect the Docket, export the proof pack and design a pilot.

● PARTNER DEMONSTRATION EDITION

AI creates output. GoalOS creates proof.

GoalOS is the control layer between autonomous AI work and institutional authority. It turns a high-stakes objective into an inspectable, challengeable and reusable **Governed Decision State** - not merely another report.

Run the live partner mission

See where it creates value

Design a bounded pilot

Illustrative partner demonstration. Architecture and reference implementation are substantial; independently reviewed deployment and real-world portfolio evidence remain explicit gates.

The missing enterprise layer

EVIDENCE COVERAGE

92%

Major claims mapped to evidence, uncertainty or an explicit block.

DECISION STATE

**PROCEED
WITH CONDITIONS**

Reversible pilot only; production authority remains blocked.

INDEPENDENT VALIDATION

5 / 5

Illustrative technical, security, commercial, operational and boundary review.

OPEN PROOF DEBT

4

Security attestation, data map, references and rollback rehearsal.

A model may answer. An agent may act

Open: [GoalOS_Partner_Demonstrator.html](#)

Authority appears only after the next gate passes.

GoalOS converts autonomous work into proof, governed capability and accountable authority.

No proof

no evolution

No evaluation

no propagation

No rollback

no release

No Chronicle entry

no future-mission influence

No valid bond receipt

no authority transition

Objective -> Mission Contract -> Proof Debt -> AGI Jobs -> ProofBundles -> Evidence Docket -> Validation -> Chronicle -> Validated Skill -> Bonded Authority

Strategic partnership diligence - from uncertainty to a bounded decision.

A hypothetical enterprise asks whether to enter a 30-day AI infrastructure pilot.

MISSION INPUT

Objective

Determine whether to enter a bounded AI infrastructure partnership pilot.

Proof level	L3 - external-review ready
Risk class	High-stakes, reversible
Validators	Technical, security, commercial, operational, boundary
Blocked claim	No production-readiness assertion

GOVERNED DECISION

Proceed with a bounded pilot - subject to four closing conditions.

- ✓ Independent security control evidence
- ✓ Complete data-flow and residency map
- ✓ Two relevant enterprise references
- ✓ Rollback rehearsal and explicit exit rights

ILLUSTRATIVE TELEMETRY

92%

Evidence coverage

5 / 5

Validator reveals

4

Open proof debt

96%

Replay-ready artifacts

Chronicle: ADMIT WITH SCOPE
Production authority remains blocked.

A proof room, not a marketing page.

Claims, evidence, contradictions, validators, open debt and authority consequences remain visible.

Strategic partnership diligence - claims matrix

REVIEWER READY

The evidence supports strategic and technical fit for a reversible pilot. Production deployment, broad data access and auto-renewal remain blocked.

ID	CLAIM	PROOF STATE	EVIDENCE / LIMITATION	AUTHORITY CONSEQUENCE
C-01	The integration is technically feasible	PASS	Architecture map, API compatibility test and sandbox integration plan.	May proceed to sandbox build.
C-02	Security controls are adequate for production	BLOCKED	Control narrative exists; independent attestation and incident evidence are missing.	Production access remains prohibited.
C-03	A restricted sandbox can be operated safely	PASS	No production data, scoped credentials, monitoring and kill switch.	Pilot authority granted with scope.
C-04	Data residency is compatible	CONDITIONAL	Proposed regions align; complete subprocessor and data-flow map is pending.	No sensitive data until closure.
C-05	Unit economics can be attractive	PASS	Illustrative load-band model and sensitivity analysis.	Negotiate price cap and volume breakpoints.
C-06	The provider can support enterprise operations	CONDITIONAL	Support model documented; two relevant references still required.	Pilot allowed; scale decision held.
C-07	Lock-in risk is controlled	CONDITIONAL	Exit path exists; contract and technical exit test remain incomplete.	Require portability and termination clauses.
C-08	The partnership is strategically aligned	PASS	Complementarity map, executive objectives and capability gap analysis.	Advance to joint pilot charter.
C-09	All legal and regulatory issues are resolved	REVIEW	Operational facts mapped; jurisdiction-specific legal review remains outside the system.	Counsel gate before production terms.
C-10	A 30-day pilot is reversible and decision-useful	PASS	Milestones, acceptance tests, day-14 checkpoint and rollback plan.	Proceed with controlled pilot.

Governed Decision State generated.

Open Proof Debt

PD-001 - Independent security control evidence
Blocks stronger authority until supplied and validated.

PD-002 - Complete data-flow / subprocessor map
Blocks stronger authority until supplied and validated.

PD-003 - Two reference calls with comparable customers
Blocks stronger authority until supplied and validated.

PD-004 - Documented rollback rehearsal and commercial exit
Blocks stronger authority until supplied and validated.

Contradiction register

CR-001
Provider markets "production ready," while independent assurance is not yet supplied.

CR-002
Low headline price conflicts with higher support and observability costs at enterprise scale.

CR-003
Fast integration claim conflicts with custom identity and data-residency requirements.

Proof pack tree

WHAT A REVIEWER CAN SEE

- **Every major claim**
PASS, CONDITIONAL, BLOCKED or REVIEW.
- **Open Proof Debt**
What evidence is required before stronger authority.
- **Contradictions**
Conflicting evidence is preserved, not hidden.
- **Authority consequence**
What may happen next - and what remains prohibited.
- **Replay path**
How another reviewer can reproduce the critical result.

Start where proof quality changes a real decision.

The initial wedge is bounded, high-value work - not autonomous everything.

01 Strategic partnership diligence

Technical, commercial, security and operational fit - with reversible pilot conditions.

GOVERNED DECISION + ACTION GRAPH

02 Enterprise AI procurement

Common claims matrix, evaluation plan, data boundary, security rubric and cost ledger.

GOVERNED DECISION + ACTION GRAPH

03 AI product launch readiness

Release, canary, repair or block - with monitoring, rollback and claim discipline.

GOVERNED DECISION + ACTION GRAPH

04 M&A and technology diligence

Evidence-bearing workstreams across product, IP, data, security and operations.

GOVERNED DECISION + ACTION GRAPH

05 Defensive cybersecurity remediation

Repo-owned, human-reviewed remediation with replay and safety invariants.

GOVERNED DECISION + ACTION GRAPH

06 R&D portfolio and capability reuse

Admit only scoped, fresh and replayable results into governed memory.

GOVERNED DECISION + ACTION GRAPH

The moat is governed capability - not prompt text.

Accepted work becomes a durable, scoped and replayable institutional asset.

01**Decision confidence**

Major claims have a declared proof state, not just persuasive wording.

02**Review velocity**

Evidence, contradictions, risk and authority consequence appear in one package.

03**Proof debt reduction**

Missing evidence is explicit and prioritized before action.

04**Institutional memory**

Chronicle prevents unsupported output from contaminating future missions.

05**Controlled reuse**

Validated Skills carry scope, freshness, replay, revocation and rollback.

06**Partner trust**

Claim boundaries and evidence status are visible rather than buried.

The durable asset is accumulated method + evidence + scope + validator history + delayed outcomes + lineage.

Land with proof. Expand with capability.

Prove bilateral value before building network effects.

1

Proof Mission Sprint

One bounded objective becomes a reviewer-ready decision state.

Services wedge + evidence

2

Enterprise Proof OS

Recurring Mission Contracts, Dockets, Chronicle and audit workflows.

Annual recurring platform

3

Private Validated Skill Graph

Customer-specific governed capability memory.

Implementation + assurance

4

Managed AGI Node Council

Independent validation without customer infrastructure burden.

ARR + metered validation

5

Cross-Institution Proof Network

Jobs, validators, challenges and capability passports.

Network effects + throughput

Company value: services + subscriptions + implementation. Protocol value: verified-work throughput + bonded security + reusable capability.

Bonded accountability - not a speculative product pitch.

GoalOS creates proof. \$AGIALPHA is designed to make accepted proof economically consequential.

Work begins

Worker proof bond

SECURED

Work becomes paid

Accepted ProofBundle + validator bonds

SECURED

Claim becomes trusted

Chronicle + challenge finality

SECURED

Claim is challenged

Evidence-bearing challenger bond

SECURED

Skill becomes reusable

Reuse bond + delayed outcome

SECURED

Node validates

Operational reserve + reputation

SECURED

Protocol upgrades

Proposal + canary + rollback reserves

SECURED

Ordinary customer experience

Fiat-denominated proof services can keep token complexity behind the scenes while professional operators and validators supply bonded security.

No equity · no dividends · no revenue share · no passive yield · no guaranteed value · no price-support promise

Every participant acts for its own account.

GoalOS conditions mission execution, validation, settlement, reuse and export on affirmative acceptance of the user-responsibility and risk-allocation framework.

Participant authority

The accepting person warrants authority to bind the represented organization and direct the mission.

Exclusive responsibility

Objectives, instructions, content, data, systems, personnel, wallets, taxes, licences, compliance, decisions and deployment remain the Participant's responsibility.

Risk assumption & release

The Participant accepts AI, smart-contract, network, token, cybersecurity, privacy, market, validator and irreversibility risks and grants the applicable release and non-recourse.

Hold harmless & non-joinder

The Participant agrees to hold harmless the Protected Parties for Participant-caused matters and keeps user-to-user matters between the relevant Participants.

CONTRACTUAL ENFORCEMENT

- Versioned acceptance receipt
- Role-specific representations
- Evidence preservation / legal hold
- Private executive conference
- Confidential mediation in Montréal
- Montréal-seated arbitration
- Montréal courts for enforcement

The versioned receipt and mission manifest travel together through every protected function.

No mission, validation, settlement, reuse or export without an effective participation receipt.

Substantial architecture. External authority remains gated.

Credibility comes from distinguishing what is specified, implemented, reference-ready, planning-ready and pending.

Doctrine and object model

SPECIFIED

Mission OS, PROOF_LOOPS, AEP-001, Chronicle, Dockets and VSG.

Browser institution

IMPLEMENTED

Standalone and runnable ATLAS operating surfaces.

AGI Node / contract packages

REFERENCE-READY

Runtime, registries, schemas, tests and deployment packs.

Private proof / Merkle / ZK

SPECIFIED / REFERENCE

Commitment, selective-disclosure and identity architecture.

Business and economics

PLANNING-READY

Proof Mission, Proof OS, private VSG and managed validation.

Reviewed live deployment

PENDING

Audited contracts, governed keys, independent controls, incident response, insurance and production observability.

Independent replay / empirical compounding

PENDING

Real missions, external reviewers, delayed outcomes and harder transfer.

The next decisive milestone is one real partner mission with primary evidence, independent replay and measured delayed outcomes.

Fifteen business days to one inspectable decision.

Choose a high-stakes but reversible objective with a named sponsor, accessible evidence, an independent reviewer and a valid participation receipt.

Partner inputs

- One consequential objective
- One executive sponsor
- Evidence and subject-matter contacts
- One independent reviewer
- A clear public/private boundary

The ask

Select one mission.

Prove the operating loop before broader adoption.

NEXT STEP

**One consequential objective.
One inspectable decision.
One reusable capability.**

GoalOS is architecturally pointed at proof-gated, economically coordinated, open-ended autonomous work. The partner proposition is narrower and practical: prove one mission, then expand only if the evidence earns it.

Now we prove it.

GOALOS / EXECUTIVE PARTNER BRIEF

The Proof OS for Autonomous AI Work

A practical, inspectable operating system for turning one consequential objective into evidence, a bounded decision and reusable institutional capability.

AI creates output. GoalOS creates proof.

FINAL PRODUCTION PARTNER EDITION • JULY 2026

Prepared for high-calibre business, technology and institutional discussions. Architecture, reference implementation, contractual participation controls and evidence operations are presented as one integrated partner system.

One important decision. One inspectable proof process.

Most AI systems optimize the production of answers. GoalOS addresses the harder institutional question: what must be proven before an answer can justify action, payment, memory, reuse or broader authority?

CANONICAL THESIS

A model may answer. An agent may act. An institution must prove.

PARTNER DEMONSTRATION EDITION

AI creates output.
GoalOS creates proof.

GoalOS is the control layer between autonomous AI work and institutional authority. It turns a high-stakes objective into an inspectable, challengeable and reusable **Governed Decision State** - not merely another report.

Run the live partner mission

See where it creates value

Design a bounded pilot

Report-only AI

Output is the endpoint

Reviewers reconstruct evidence and assumptions manually.

GoalOS

Decision state is the endpoint

Claims, evidence, risk, action and rollback travel together.

Illustrative governed decision state

Strategic partnership diligence / sandbox pilot

DEMO READY

EVIDENCE COVERAGE

92%

Major claims mapped to evidence, uncertainty or an explicit block.

DECISION STATE

PROCEED WITH CONDITIONS

Reversible pilot only; production authority remains blocked.

INDEPENDENT VALIDATION

5 / 5

Illustrative technical, security, commercial, operational and boundary review.

OPEN PROOF DEBT

4

Security attestation, data map, references and rollback rehearsal.

A model may answer. An agent may act. An institution must prove.

Illustrative partner demonstration. Architecture and reference implementation are substantial; independently reviewed deployment and real-world portfolio evidence remain explicit gates.

The standalone partner demonstrator: a browser-local proof institution with no external asset dependency.

The input A consequential objective, decision deadline, scope, risk class, proof level, named reviewers and rollback conditions.	The output A Governed Decision State: claims, sources, contradictions, Evidence Docket, verifier report, risk, action and memory disposition.
The operating law Unsupported claims become Proof Debt. Missing evidence blocks authority rather than disappearing into confident prose.	The durable asset Only admitted, scoped, replayable and revocable capability may become institutional memory or influence future missions.

Authority appears only after the next gate passes.

GoalOS separates generation from authority, evidence from memory, and memory from settlement. Each object has a narrow purpose and an explicit failure branch.

Gate	Institutional object	What it controls
1	Objective / Mission Contract	Freeze decision, scope, proof level, risk, validators and rollback.
2	Proof Debt / AGI Jobs	Expose unsupported claims and create mission-specific proof-producing work.
3	ProofBundles / Evidence Docket	Package evidence, provenance, tests, costs, risks and replay paths.
4	Validation / Chronicle	Independent review decides what passes, fails, requires repair or remains blocked.
5	Validated Skill / Merkle Root	Admitted capability becomes scoped, versioned, replayable and revocable.
6	Bonded settlement / harder mission	Accepted proof becomes economically consequential and is tested on future work.

Where it is immediately useful

Strategic partnership diligence Turn a partnership thesis into a bounded pilot decision with explicit closing conditions.	Enterprise AI procurement Compare vendors under common tasks, budgets, data boundaries, risks and replay requirements.
AI product launch readiness Determine what is ready for canary release, what requires repair and what remains prohibited.	M&A and technology diligence Separate claims, assets, dependencies, customer evidence, security and integration risk.
Defensive cybersecurity remediation Produce evidence-bearing, human-reviewed improvements without unsafe autonomy.	R&D portfolio and capability reuse Preserve validated methods and outcomes as governed capability, not raw prompt history.

A proof room - not a marketing page.

REVIEWER READY

The evidence supports strategic and technical fit for a reversible pilot. Production deployment, broad data access and auto-renewal remain blocked.

ID	CLAIM	PROOF STATE	EVIDENCE / LIMITATION	AUTHORITY CONSEQUENCE
C-01	The integration is technically feasible	PASS	Architecture map, API compatibility test and sandbox integration plan.	May proceed to sandbox build.
C-02	Security controls are adequate for production	BLOCKED	Control narrative exists; independent attestation and incident evidence are missing.	Production access remains prohibited.
C-03	A restricted sandbox can be operated safely	PASS	No production data, scoped credentials, monitoring and kill switch.	Pilot authority granted with scope.
C-04	Data residency is compatible	CONDITIONAL	Proposed regions align; complete subprocessor and data-flow map is pending.	No sensitive data until closure.
C-05	Unit economics can be attractive	PASS	Illustrative load-band model and sensitivity analysis.	Negotiate price cap and volume breakpoints.
C-06	The provider can support enterprise operations	CONDITIONAL	Support model documented; two relevant references still required.	Pilot allowed; scale decision held.
C-07	Lock-in risk is controlled	CONDITIONAL	Export path exists; contract and technical exit test remain incomplete.	Require portability and termination clauses.
C-08	The partnership is strategically aligned	PASS	Complementarity map, executive objectives and capability gap analysis.	Advance to joint pilot charter.
C-09	All legal and regulatory issues are resolved	REVIEW	Operational facts mapped; jurisdiction-specific legal review remains outside the system.	Counsel gate before production terms.
C-10	A 30-day pilot is reversible and decision-useful	PASS	Milestones, acceptance tests, day-14 checkpoint and rollback plan.	Proceed with controlled pilot.

Governed Decision State generated.

Open Proof Debt

PD-001 · Independent security control evidence

Blocks stronger authority until supplied and validated.

PD-002 · Complete data-flow / subprocessor map

Blocks stronger authority until supplied and validated.

PD-003 · Two reference calls with comparable customers

Blocks stronger authority until supplied and validated.

PD-004 · Documented rollback rehearsal and commercial exit

Blocks stronger authority until supplied and validated.

Contradiction register

CR-001

Provider markets "production ready," while independent assurance is not yet supplied.

CR-002

Low headline price conflicts with higher support and observability costs at enterprise scale.

CR-003

Fast integration claim conflicts with custom identity and data-residency requirements.

Illustrative Evidence Docket showing claim states, proof debt, contradictions, validator disposition and replay path.

Flagship deliverable: the Governed Decision State

- Mission Contract: the objective, decision, boundaries, authority and definition of done.
- Claims Matrix: every consequential claim tied to evidence, uncertainty and authority consequence.
- Proof Debt Register: missing proof remains visible work and blocks stronger claims.
- Evidence Docket and Verifier Report: reviewer-ready proof room and explicit pass, repair, reject or hold status.
- Risk and Cost Ledgers: downside, resource burden, legal boundaries and assumptions remain inspectable.
- Action Graph: owners, dependencies, approvals, stop conditions and rollback path.
- Chronicle Verdict and Capability Passport: what may enter memory, under what scope, and how it can be revoked.

PARTNER VALUE

The durable asset is accumulated method + evidence + scope + validator history + delayed outcomes + policy + lineage - not prompt text.

GOALOS / AGI ALPHA RESEARCH ARCHITECTURE · JULY 2026

PAGE 4

04 · COMMERCIAL EXPANSION

Land with proof. Expand with capability.

The initial commercial wedge is intentionally narrow: prove one consequential mission. Recurring workflows, governed memory and network effects are earned only after bilateral value is visible.

Commercial adoption path

Step	Offer	Partner outcome	Economic role
1	Proof Mission Sprint	One bounded objective becomes a reviewer-ready decision state.	Services wedge and real evidence.
2	Enterprise Proof OS	Recurring missions, Dockets, Chronicle and audit workflows.	Annual recurring revenue.
3	Private Validated Skill Graph	Customer-specific governed capability memory.	Implementation + recurring assurance.
4	Managed AGI Node Council	Independent validation without infrastructure burden.	ARR + metered usage.
5	Cross-Institution Proof Network	Jobs, validators, challenges and skill passports across organizations.	Network effects and proof throughput.

Company value Services, subscriptions and implementation are tied to real customer decisions and recurring assurance.	Protocol value Verified-work throughput, bonded security and reusable capability increase only as useful authority transitions occur.
Customer posture A normal enterprise buyer can remain tokenless by default while professional operators supply bonded protocol security.	Expansion rule No network-first scaling. Convert repeated proof demand into capability, then expand only when the evidence supports it.

Fifteen business days to one inspectable decision.

DAYS 1-2 Freeze the mission Decision, scope, proof level, validators, blocked claims and rollback.	DAYS 3-8 Produce proof AGI Jobs, source map, ProofBundles, contradictions, cost and risk.	DAYS 9-12 Validate and replay Independent review, repair loop, challenge handling and packaging.	DAYS 13-15 Decide and package Decision State, Action Graph, Chronicle and capability passport.
---	--	---	---

Partner inputs

- One consequential but reversible objective with a real decision deadline.
- One executive sponsor and access to relevant evidence and subject-matter contacts.
- One independent reviewer or review group able to challenge the result.
- A defined public/private boundary and a clear list of prohibited actions.
- Agreement on what “done,” “blocked,” “repair,” and “rollback” mean before work begins.

Evidence status and claim boundary

Layer	Status	Meaning
Doctrine and object model	SPECIFIED	Mission OS, PROOF_LOOPS, AEP-001, Chronicle, Dockets and VSG.
Browser institution	IMPLEMENTED	Standalone offline demonstrator and operating surfaces.
Runtime and contract packages	REFERENCE-READY	Reference runtime, registries, schemas, tests and deployment packs.
Business and economics	PLANNING-READY	Proof Mission, recurring Proof OS, private VSG and managed validation.
Reviewed live deployment	PENDING	Audited contracts, governed keys, independent controls, incident response, insurance and production observability.
Independent replay / empirical compounding	PENDING	External reviewers, delayed outcomes and harder transfer missions.

THE ASK

Select one mission. Prove the operating loop before broader adoption.

Participation is conditioned on affirmative, versioned acceptance of the GoalOS Enterprise User Responsibility Framework. Each Participant acts solely for its own account and remains exclusively responsible for its objectives, instructions, content, data, systems, personnel, wallets, keys, transactions, taxes, reporting, licences, regulatory compliance, security, insurance, decisions and downstream deployment. Each Participant also assumes the applicable technical and economic risks and accepts release, non-recourse, hold-harmless for Participant-caused matters and non-joinder obligations in favour of the Protected Parties. User-to-user matters remain between the relevant Participants. Permitted professional disputes follow particularized notice, evidence preservation, confidential Montréal mediation and Montréal-seated arbitration.

GOALOS / SAMPLE GOVERNED DECISION STATE

Strategic Partnership Diligence

Illustrative evidence package for deciding whether to enter a bounded AI infrastructure partnership pilot.

Proceed with a 30-day sandbox pilot - subject to four closing conditions.

FINAL PRODUCTION PARTNER SAMPLE · JULY 2026

This sample demonstrates the structure and usefulness of GoalOS. It is not based on a real provider, does not constitute external validation or professional advice, and grants no production authority.

ILLUSTRATIVE PARTNER DEMONSTRATION

Not an external validation, production certification, legal opinion, financial representation or investment recommendation.

01 · EXECUTIVE DECISION

Proceed with a 30-day sandbox pilot - subject to four closing conditions.

The evidence supports strategic and technical fit for a reversible pilot. Production deployment, broad data access and auto-renewal remain blocked.

92%	5 / 5	4	96%
Evidence coverage	Validator reveals	Open proof debt	Replay-ready artifacts

Closing conditions

- Independent security attestation or equivalent control evidence
- Approved data-flow and residency map
- Two relevant enterprise reference calls
- Rollback rehearsal, capped budget and explicit termination rights

CHRONICLE VERDICT

ADMIT WITH SCOPE. Pilot authority is granted. Production authority remains blocked.

Executive interpretation

The evidence is sufficient to justify a limited learning action, but not sufficient to justify production integration, broad data access, automatic renewal or any assertion of enterprise-wide readiness. The recommended action is designed to be reversible, measurable and decision-useful.

ILLUSTRATIVE PARTNER DEMONSTRATION

Not an external validation, production certification, legal opinion, financial representation or investment recommendation.

02 · MISSION CONTRACT

The decision is frozen before autonomous work begins.

Field	Frozen term
Mission ID	GOS-PARTNER-DEMO-001
Objective	Determine whether to enter a bounded AI infrastructure partnership pilot.
Decision to support	Whether to authorize a bounded 30-day sandbox pilot.
Sponsor	Illustrative executive sponsor
Risk class	High-stakes, reversible, no production authority
Proof level	L3 - external-review ready
Required reviewers	Technical, security, commercial, operational and boundary reviewer
Allowed environment	Partner-owned sandbox; synthetic or non-sensitive data only
Prohibited actions	Production access, unrestricted credentials, auto-renewal, auto-merge, unsupported public claims
Definition of done	Evidence Docket complete; validator reveal; Chronicle decision; action and rollback graph
Rollback obligation	Disable integration, revoke credentials, export artifacts, confirm data deletion and record closure
Claim boundary	Illustrative partner demonstration; no legal, financial, investment or production certification authority

Proof questions

- Is the integration technically feasible under a restricted enterprise architecture?
- Can the pilot operate safely with scoped identity, no production data, monitoring and a kill switch?
- Are security, data-residency, support, economics and exit claims supported by evidence?
- What remains unproven and which missing proof must block production authority?
- Can the pilot generate a better decision without creating irreversible lock-in?

ILLUSTRATIVE PARTNER DEMONSTRATION

Not an external validation, production certification, legal opinion, financial representation or investment recommendation.

03 · CLAIMS MATRIX · PART I

Every consequential claim receives a proof state.

ID	Claim	State	Evidence / limitation	Authority consequence
C-01	The integration is technically feasible	PASS	Architecture map, API compatibility test and sandbox integration plan.	May proceed to sandbox build.
C-02	Security controls are adequate for production	BLOCKED	Control narrative exists; independent attestation and incident evidence are missing.	Production access remains prohibited.
C-03	A restricted sandbox can be operated safely	PASS	No production data, scoped credentials, monitoring and kill switch.	Pilot authority granted with scope.
C-04	Data residency is compatible	CONDITIONAL	Proposed regions align; complete subprocessor and data-flow map is pending.	No sensitive data until closure.
C-05	Unit economics can be attractive	PASS	Illustrative load-band model and sensitivity analysis.	Negotiate price cap and volume breakpoints.

OPERATING RULE

A claim may pass, fail, remain conditional, require review or remain blocked.
Confidence does not silently substitute for proof.

State vocabulary

PASS Evidence supports the bounded claim and the stated authority consequence.	CONDITIONAL The claim may support limited action only if named conditions close.
REVIEW Operational evidence exists, but professional or jurisdiction-specific judgment is still required.	BLOCKED The evidence is insufficient for the requested authority; action remains prohibited.

ILLUSTRATIVE PARTNER DEMONSTRATION

Not an external validation, production certification, legal opinion, financial representation or investment recommendation.

04 · CLAIMS MATRIX · PART II

Decision usefulness comes from visible limits.

ID	Claim	State	Evidence / limitation	Authority consequence
C-06	The provider can support enterprise operations	CONDITIONAL	Support model documented; two relevant references still required.	Pilot allowed; scale decision held.
C-07	Lock-in risk is controlled	CONDITIONAL	Export path exists; contract and technical exit test remain incomplete.	Require portability and termination clauses.
C-08	The partnership is strategically aligned	PASS	Complementarity map, executive objectives and capability gap analysis.	Advance to joint pilot charter.
C-09	All legal and regulatory issues are resolved	REVIEW	Operational facts mapped; jurisdiction-specific legal review remains outside the system.	Counsel gate before production terms.
C-10	A 30-day pilot is reversible and decision-useful	PASS	Milestones, acceptance tests, day-14 checkpoint and rollback plan.	Proceed with controlled pilot.

What the matrix prevents

- A strong strategic fit claim from being mistaken for a production-readiness claim.
- A low headline price from masking support, observability, security and exit costs.
- A sandbox integration result from authorizing sensitive data or unrestricted credentials.
- A positive pilot result from becoming an automatic renewal, scale decision or public endorsement.
- Operational evidence from being mistaken for jurisdiction-specific legal or regulatory advice.

AUTHORITY CONSEQUENCE

The result is not merely “yes” or “no.” It states exactly what may proceed, what remains blocked, and what evidence can expand authority.

ILLUSTRATIVE PARTNER DEMONSTRATION

Not an external validation, production certification, legal opinion, financial representation or investment recommendation.

05 · PROOF DEBT, CONTRADICTIONS AND VALIDATION

Uncertainty becomes explicit work - not hidden prose.

Open Proof Debt

ID	Outstanding proof obligation	Authority consequence
PD-001	Independent security control evidence	Blocks production or scale authority until supplied and validated.
PD-002	Complete data-flow and subprocessor map	Blocks production or scale authority until supplied and validated.
PD-003	Two reference calls with comparable customers	Blocks production or scale authority until supplied and validated.
PD-004	Documented rollback rehearsal and commercial exit	Blocks production or scale authority until supplied and validated.

Contradiction register

ID	Contradiction requiring decision-maker visibility
CR-001	Provider markets “production ready,” while independent assurance is not yet supplied.
CR-002	Low headline price conflicts with higher support and observability costs at enterprise scale.
CR-003	Fast integration claim conflicts with custom identity and data-residency requirements.

Validator disposition

Reviewer	Verdict	Reason
Technical reviewer	PASS WITH SCOPE	Sandbox integration is feasible; production architecture remains outside scope.
Security reviewer	HOLD PRODUCTION	Independent assurance and incident evidence are required.
Commercial reviewer	PASS WITH CONDITIONS	Price cap, volume breakpoints and explicit exit terms required.
Operational reviewer	CONDITIONAL	Reference calls and support escalation evidence remain open.
Boundary reviewer	PASS	Claim language remains bounded; professional advice and production certification are excluded.

ILLUSTRATIVE PARTNER DEMONSTRATION

Not an external validation, production certification, legal opinion, financial representation or investment recommendation.

06 · ACTION GRAPH, CHRONICLE AND REUSE

The decision becomes an executable, reversible plan.

ID	Action	Owner	Proof gate	Rollback / stop
A-01	Execute pilot charter and participation receipt	Authorized executive sponsors	All closing conditions accepted	Do not start
A-02	Provision isolated sandbox	Technical leads	Scoped credentials + synthetic data	Revoke access
A-03	Run acceptance tasks	Mission operator	Common tasks, budget and evidence schema	Stop and preserve logs
A-04	Conduct day-14 review	Validator council	Evidence Docket and Proof Debt status	Repair / narrow / terminate
A-05	Run rollback rehearsal	Operations + security	Export, credential revocation, data deletion	Execute rollback
A-06	Issue final pilot verdict	Executive sponsor	Independent review and delayed outcome	No scale authority

Chronicle decision

ADMIT WITH SCOPE

Record the partnership-diligence method and pilot design as reusable capability.
Do not admit any production-readiness, enterprise-security or broad-regulatory conclusion.

Capability passport

Field	Value
Capability ID	VSK-PARTNER-DILIGENCE-001
Name	Bounded AI infrastructure partnership diligence
Allowed reuse	Future reversible partnership and procurement missions with comparable evidence classes
Excluded reuse	Production certification, legal advice, security certification, investment recommendation
Freshness rule	Revalidate pricing, security, data flows, support and contract terms for each provider and date
Required reviewers	Technical + security + commercial + operational + boundary
Rollback	Revoke or supersede capability if delayed outcomes, incidents or external review contradict the evidence

Participant allocation: the mission sponsor and represented organization are exclusively responsible for the objective, evidence, instructions, approvals, taxes, licences, security, deployment and downstream use. The receipt and protective covenants travel with the mission package.

07 • PARTICIPATION RECEIPT & RESPONSIBILITY ALLOCATION

The acceptance record travels with the mission package.

CONTRACTUAL GATE

No mission execution, validation, settlement, reuse or export is authorized without a valid, versioned participation receipt.

Field	Recorded allocation
Terms version	GOS-EPUR-2026.07-v2.1
Terms hash	sha256:adc7ee767ea566ba2aa12885e50bbfd7bf22c65708b00ddfd292772fac8298cd
Participant role	Mission Sponsor / represented enterprise
Authority warranty	Accepting person confirms authority to bind the represented organization.
Exclusive responsibility	Objectives, instructions, data, content, systems, personnel, transactions, taxes, licences, compliance, decisions and downstream deployment.
Risk allocation	AI, software, smart-contract, network, token, cybersecurity, privacy, market, validator and irreversibility risks are accepted by the Participant.
Protective covenants	Release, non-recourse, hold-harmless for Participant-caused matters, participant-to-participant allocation and non-joinder obligations in favour of the Protected Parties.
Dispute protocol	Particularized notice -> evidence preservation -> executive conference -> confidential Montréal mediation -> Montréal-seated arbitration.
Receipt status	ACTIVE / bound to mission manifest and exported proof pack

Participant allocation: the mission sponsor and represented organization retain exclusive responsibility for the objective selected, evidence supplied, instructions issued, approvals granted, tax and regulatory treatment, security, personnel, deployment and every downstream use. The receipt, applicable terms and mission artifacts form one evidentiary package.

GOALOS / AGI ALPHA

ENTERPRISE PARTICIPATION & USER RESPONSIBILITY INSTRUMENT

Exclusive User Responsibility · Assumption of Risk · Release · Hold Harmless · Non-Joinder · Montréal Dispute Protocol

FRENCH-FIRST BILINGUAL FINAL PRODUCTION PARTNER EDITION

Version GOS-EPUR-2026.07-v2.1 | Effective July 2026

Terms hash: sha256:adc7ee767ea566ba2aa12885e50bbfd7bf22c65708b00ddfd292772fac8298cd

OPERATIVE COVENANT

Every Participant acts solely for its own account and assumes exclusive responsibility for its activity, decisions, transactions, obligations and downstream use.

This instrument is intended to be incorporated into every professional or enterprise partner interaction, proof mission, interface, API, validation, settlement, reuse or deployment acceptance flow. The French version is presented first.

DOCUMENT CONTROL & CONTRACTUAL HIERARCHY

Control field	Operative value
Document ID	GOS-EPUR-2026.07-v2.1
Effective date	July 2026
Canonical terms hash	sha256:adc7ee767ea566ba2aa12885e50bbfd7bf22c65708b00ddfd292772fac8298cd
Intended capacity	Enterprise, professional, institutional, governmental and research participants only
Covered system	GoalOS, Mission OS, AGI Jobs, AGI Nodes, Chronicle, VSG, \$AGIALPHA, smart contracts, interfaces, APIs, proof missions, Dockets, artifacts, namespaces and derivative deployments
Acceptance evidence	Versioned receipt, represented principal, role, timestamp, interface version, wallet/credential event and mission identifiers
Governing framework	Québec law and applicable federal law of Canada; Montréal professional dispute protocol
Third-party protection	Each Protected Party is an intended third-party beneficiary with direct enforcement rights

ORDER OF APPLICATION

Affirmative acceptance receipt -> full participation terms -> mission-specific contract -> deployed technical rules -> explanatory materials. No public communication or interface summary reduces the Participant obligations stated in the full terms.

PARTIE I — VERSION FRANÇAISE

Avis contractuel de participation entreprise, responsabilité exclusive de l'utilisateur, acceptation des risques, quittance, tenue indemne et non-mise-en-cause.

AVIS IMPORTANT

L'accès aux fonctions interactives, l'exécution d'une mission, la validation, le règlement, la réutilisation et l'exportation sont conditionnels à une acceptation expresse et versionnée.

1. CAPACITÉ ENTREPRISE ET PROFESSIONNELLE

Le Système et les documents destinés aux partenaires sont offerts exclusivement à des fins commerciales, institutionnelles, de recherche, professionnelles, gouvernementales ou d'évaluation d'entreprise. Le **Participant** déclare et garantit qu'il agit à ce titre, qu'il possède la pleine capacité et l'autorité juridiques et qu'il ne se fonde pas sur un statut ni sur des recours de consommateur.

2. ACCEPTATION EXPRESSE ET MANDANT REPRÉSENTÉ

L'accès aux fonctions interactives, l'exécution d'une mission, la validation, le règlement, la réutilisation, l'exportation, les appels API, les signatures de portefeuille, les identifiants ou les transactions sont conditionnels à l'acceptation expresse des Conditions versionnées. La personne qui accepte déclare être autorisée à lier sa propre personne ainsi que toute organisation identifiée dans le reçu d'acceptation. Le reçu, l'événement d'identification, la signature de portefeuille, la version et l'empreinte des Conditions, l'horodatage, le rôle, le mandant représenté, la version d'interface, la chaîne, le contrat et les identifiants de mission constituent une preuve admissible de l'acceptation et de l'attribution.

3. RESPONSABILITÉ EXCLUSIVE DU PARTICIPANT

Chaque **Participant** agit exclusivement pour son propre compte et assume seul, de façon exclusive, continue et non délégable :

- a) ses objectifs, instructions, requêtes, tâches, critères d'acceptation, décisions et approbations; b) son personnel, ses mandataires, entrepreneurs, utilisateurs et identifiants; c) tout contenu, toute donnée, tout renseignement personnel, renseignement confidentiel, secret commercial, droit de propriété intellectuelle, licence et autorisation fourni ou référencé; d) la garde des portefeuilles, clés, signatures, appareils, infrastructures, points d'accès, intégrations, contrôles d'accès, sauvegardes et interventions en cas d'incident; e) tout travail, livrable, vote, validation, contestation, réutilisation, suivi, déploiement et toute conséquence en aval; f) l'emploi, la qualification des travailleurs, la paie, les avantages, l'assurance, la santé et sécurité et les obligations envers les entrepreneurs; g) tout impôt, droit, prélèvement, retenue, remise, facture, registre, déclaration, relevé et dépôt découlant de son activité; h) les sanctions, contrôles à l'exportation, règles anticorruption, règles de lutte contre le blanchiment, exigences de protection des renseignements personnels, de cybersécurité, de consommation, professionnelles, de permis, sectorielles et réglementaires; et i) l'obtention de conseils juridiques, fiscaux, financiers, techniques, de sécurité et professionnels indépendants.

4. RELATIONS ENTRE UTILISATEURS

Toute relation de travail, tâche, portée, livrable, validation, contestation, paiement, attente de règlement, obligation de confidentialité, convention de propriété intellectuelle, relation d'emploi ou d'entrepreneur, niveau de service, garantie, recours et différend existe exclusivement entre les Participants qui la créent ou l'acceptent. Chaque **Participant** doit documenter sa propre convention et exercer ses recours contre sa propre contrepartie. Aucun **Participant** ne peut prétendre qu'une Partie protégée a assumé, garanti, assuré, souscrit, supervisé ou accepté une obligation entre utilisateurs, sauf convention écrite distincte et expresse.

5. ACCEPTATION DES RISQUES

Chaque **Participant** accepte sciemment et volontairement tous les risques liés à l'intelligence artificielle, aux systèmes autonomes ou semi-autonomes, aux logiciels, contrats intelligents, actifs numériques, clés cryptographiques, validateurs, réseaux, ponts, oracles, services de tiers, composants libres, stockage adressé par contenu et transactions irréversibles, notamment les erreurs, hallucinations, omissions, biais, défaillances de modèles ou d'outils, pertes de données, atteintes à la vie privée, cyberattaques, exploitations, erreurs logiques, réentrances, échecs de mise à niveau, réorganisations de chaîne, congestion, devancement, MEV, échecs de transaction, pénalités, pertes de clés, volatilité, illiquidité, changements réglementaires, requalifications fiscales, erreurs, collusion ou absence de validateurs, retards de différend, force majeure et perte totale d'actifs numériques. Le **Participant** décide seul si, quand et comment agir à partir d'un résultat.

6. ABSENCE DE CONFIANCE ET D'OBLIGATION D'INTERVENTION

Les résultats, démonstrations, scores, décisions, Dockets, ProofBundles, validations, attestations, inscriptions Chronicle et objets de capacité sont des intrants à l'appréciation propre du **Participant**. Celui-ci doit vérifier indépendamment toute affirmation importante et obtenir toutes les approbations requises. Aucune Partie protégée n'assume l'obligation de surveiller les participants, superviser le travail, vérifier la légalité, effectuer des contrôles KYC ou AML, retenir ou remettre des impôts, émettre des formulaires, conserver des données, maintenir la disponibilité, résoudre des différends, renverser des transactions, secourir des actifs, récupérer des clés, assurer des pertes, fournir des conseils professionnels ou atteindre un résultat.

7. FOURNITURE EN L'ÉTAT ET EXCLUSION DE GARANTIES

Dans toute la mesure permise par le droit applicable, le Système et les documents connexes sont fournis « EN L'ÉTAT », « SELON DISPONIBILITÉ » et « AVEC TOUS LEURS DÉFAUTS ». Sont exclues toutes garanties, représentations, conditions et obligations expresses, implicites, légales ou accessoires, notamment quant à la qualité marchande, la qualité, l'adaptation à un usage, le titre, l'absence de contrefaçon, l'exactitude, l'exhaustivité, la sécurité, la disponibilité, l'interopérabilité, la conformité juridique, le traitement fiscal, le fonctionnement sans erreur ou ininterrompu, la valeur, la liquidité et tout résultat particulier.

8. QUITTANCE, RENONCIATION, ENGAGEMENT DE NE PAS POURSUIVRE ET NON-RECOURS

Dans toute la mesure permise par le droit applicable, chaque **Participant** donne irrévocablement quittance aux **Parties protégées** et renonce à toute réclamation, demande, action, cause d'action, perte, responsabilité, dommage, coût et dépense découlant de l'Activité du **Participant** ou s'y rapportant; il s'engage à ne pas poursuivre ni réclamer contribution, subrogation, restitution, traçage, remise de profits, fiducie par interprétation, privilège, saisie, saisie-arrêt, sûreté ou autre recours contre une Partie protégée ou contre un solde, une mise, un cautionnement, une unité de jeton, une réserve, un séquestre, une

récompense, des frais, une position de liquidité, un actif de contrat intelligent ou une écriture comptable technique associée au protocole, sauf une créance du **Participant** que le code déployé attribue expressément à ce **Participant**.

9. TENUE INDEMNÉ; FAITS ATTRIBUABLES AU PARTICIPANT

Dans toute la mesure permise par le droit applicable, chaque Participant convient de tenir indemne toute Partie protégée à l'égard des réclamations de tiers, responsabilités, cotisations, impôts, pénalités, intérêts, pertes, dommages, coûts et dépenses découlant de l'Activité du Participant ou s'y rapportant; d'une relation entre utilisateurs créée ou acceptée par le Participant; de ses contenus, données, instructions, portefeuilles, clés, systèmes, travaux, validations, contestations, réutilisations, déploiements ou déclarations publiques; d'une violation des présentes Conditions; d'une contrefaçon ou appropriation illicite; d'un événement de confidentialité ou de cybersécurité; d'une réclamation d'emploi ou de travailleur; d'une obligation fiscale, de retenue ou de déclaration; d'une question de sanctions ou de réglementation; ou de l'acte ou omission d'une personne utilisant ses identifiants. Aucun Participant ne peut prétendre admettre une faute au nom d'une Partie protégée, la lier, la restreindre ou lui imposer une obligation sans son consentement écrit préalable. Le présent article ne crée aucune obligation indépendante de prendre en charge une défense ni d'avancer des frais juridiques ou d'expertise. Le présent article ne s'applique pas à la faute intentionnelle ou lourde d'une Partie protégée ni à une responsabilité que le droit applicable interdit d'exclure, de limiter ou de transférer.

10. IMPÔTS, RETENUES ET REGISTRES

Tous les impôts et toutes les conséquences fiscales découlant de l'Activité du Participant sont supportés par le Participant dont l'activité les crée, sous réserve de toute obligation impérative que le droit applicable impose directement à une autre personne. Chaque Participant doit déterminer la qualification, la valeur, la source, le moment, le prix de base, les déclarations, retenues, perceptions, remises et documents; conserver des registres complets; émettre les factures et formulaires requis; et payer les impôts, droits, prélèvements, pénalités et intérêts dont il est responsable. Aucune Partie protégée ne s'engage à calculer, retenir, percevoir, remettre ou déclarer un impôt, ni à émettre un formulaire fiscal pour un Participant, sauf disposition expresse d'une convention distincte signée.

11. \$AGIALPHA ET ACTIVITÉ SUR ACTIFS NUMÉRIQUES

Toute acquisition, détention, cession, mise en garantie, jalonnement, séquestre, récompense, remboursement, confiscation, contestation, validation, règlement ou autre utilisation de \$AGIALPHA ou d'un actif numérique est effectuée exclusivement à l'initiative, pour le compte et aux risques du **Participant**. Celui-ci assume seul la légalité, l'admissibilité, la convenance, la garde, la comptabilisation, l'évaluation, le traitement fiscal et la qualification réglementaire. Aucune participation au capital, propriété, dividende, part de revenus, rendement, rachat, appréciation, liquidité, soutien de prix ou profit n'est promis ni garanti.

12. NON-MISE-EN-CAUSE; MATIÈRES ENTRE UTILISATEURS

Chaque Participant doit maintenir toute matière entre utilisateurs entre les Participants concernés et ne doit pas nommer, mettre en cause, appeler en garantie, rechercher un recouvrement auprès d'une Partie protégée ni autrement l'impliquer au seul motif d'un différend entre Participants, de l'association de cette Partie protégée avec le Système, ou de la simple utilisation, publication, référence ou mise à disposition du Système, des documents, de l'interface, d'un contrat intelligent ou de l'infrastructure technique. Si une Partie protégée est nommée en contravention du présent article, le Participant responsable doit prendre promptement toutes les mesures raisonnables sous son contrôle afin de se désister à son égard ou d'en demander la mise hors de cause. Le présent article ne restreint ni une procédure légalement requise, ni une réclamation directe expressément permise par une convention distincte signée, ni un droit, recours, forum ou obligation auquel le droit applicable interdit de renoncer, de limiter ou de transférer.

13. PRÉVENTION DES DIFFÉRENDS PROFESSIONNELS ET FORUM DE MONTRÉAL

Avant d'introduire une réclamation permise contre une Partie protégée, le **Participant** doit transmettre un avis de réclamation détaillé, préserver toute preuve pertinente, imposer une mise en suspens juridique interne, respecter une période de statu quo et de confidentialité de 30 jours et participer à une conférence entre représentants principaux. Les questions techniques ou comptables peuvent être soumises à un expert indépendant. Tout différend non réglé est soumis à une médiation confidentielle à Montréal, Québec, Canada puis, à défaut de règlement, à un arbitrage final, exécutoire et confidentiel ayant son siège à Montréal devant un arbitre indépendant, en français ou en anglais selon le choix licite. Toute procédure judiciaire permise aux fins de mesures provisoires, d'exécution, d'homologation ou d'une question non arbitrabile est introduite exclusivement devant les tribunaux du district judiciaire de Montréal. Chaque **Participant** professionnel renonce aux procédures représentatives, collectives, consolidées et aux actions collectives ainsi qu'aux objections fondées sur le lieu ou le forum non conveniens, dans toute la mesure permise par le droit applicable.

14. PREUVE ÉLECTRONIQUE, REGISTRES ET SÉCURITÉ

Chaque **Participant** conserve pendant au moins sept ans, ou pendant toute période plus longue exigée par la loi, les versions et empreintes des Conditions, reçus, signatures, événements de portefeuille, journaux, requêtes, résultats, documents sources, approbations, ProofBundles, dossiers de validation, Dockets, documents fiscaux et dossiers de déploiement. Les documents électroniques, signatures cryptographiques, empreintes de contenu, registres de chaîne, journaux d'interface et reçus d'acceptation peuvent établir l'identité, l'autorité, l'instruction, l'acceptation, l'attribution, le moment et l'état.

15. PARTIES PROTÉGÉES ET TIERS BÉNÉFICIAIRES

« Parties protégées » désigne tout auteur, éditeur, concepteur, chercheur, développeur, mainteneur, contributeur, concédant, administrateur, réviseur, validateur, modérateur, fournisseur de nœud, fournisseur d'interface ou d'infrastructure, entrepreneur, conseiller, société affiliée, dirigeant, administrateur, employé, mandataire, délégué, successeur et ayant droit associé à GoalOS, AGI ALPHA, AGI Jobs, AGI Nodes, Chronicle, au Validated Skill Graph, à \$AGIALPHA, aux espaces de noms, documents, logiciels, contrats intelligents, interfaces, API ou déploiements connexes, y contribuant, y étant référencé ou en fournissant un élément. Chaque Partie protégée est un tiers bénéficiaire intentionnel pouvant faire exécuter directement les dispositions de quittance, non-recours, tenue indemne, limitation, non-mise-en-cause, confidentialité et règlement des différends.

16. LIMITATION DE RESPONSABILITÉ

Dans toute la mesure permise par le droit applicable, aucune Partie protégée n'est responsable des dommages indirects, accessoires, consécutifs, exemplaires, particuliers, punitifs ou aggravés, ni de la perte de profits, revenus, affaires, occasions, achalandage, données, vie privée, actifs numériques, valeur marchande, économies anticipées ou coûts de remplacement. La responsabilité globale de l'ensemble des **Parties protégées** découlant d'un même événement ou d'une série d'événements liés ne dépasse pas 100 \$ CA, ou tout montant minimal supérieur imposé par une règle impérative applicable.

17. DISPOSITIONS GÉNÉRALES

Les présentes Conditions, les conditions complètes applicables, le reçu d'acceptation et les règles techniques déployées constituent l'entente entière relative à l'Activité du Participant. Le code déployé détermine les transitions d'état techniques; les présentes Conditions répartissent contractuellement les responsabilités et les risques. Les modifications peuvent être publiées sous forme versionnée et s'appliquent prospectivement après acceptation ou utilisation continue lorsqu'elle est licite. Toute disposition invalide ou inexécutoire est dissociée ou réduite au minimum nécessaire; les autres demeurent en vigueur. Aucune renonciation n'est continue. Le Participant ne peut céder ses droits ou obligations sans consentement écrit préalable. Les dispositions relatives à la responsabilité, aux risques, à la quittance, au non-recours, à la tenue indemne, aux impôts, aux actifs numériques, à la non-mise-en-cause, à la preuve, à la confidentialité, au règlement des différends, à la limitation et aux droits des tiers bénéficiaires survivent indéfiniment. Les règles impératives et non susceptibles de renonciation prévalent uniquement dans la mesure minimale juridiquement requise.

PART II — ENGLISH VERSION

Enterprise Participation, Exclusive User Responsibility, Assumption of Risk, Release, Hold-Harmless and Non-Joinder Terms.

IMPORTANT NOTICE

Access to interactive functions, mission execution, validation, settlement, reuse and export is conditioned on affirmative, versioned acceptance.

1. ENTERPRISE AND PROFESSIONAL CAPACITY

The System and partner materials are offered solely for commercial, institutional, research, professional, governmental, or enterprise evaluation and use. The **Participant** represents and warrants that it is acting in such a capacity, has full legal capacity and authority, and is not relying on consumer status or consumer remedies.

2. AFFIRMATIVE ASSENT AND REPRESENTED PRINCIPAL

Access to interactive functions, mission execution, validation, settlement, reuse, export, API calls, wallet signatures, credentials, or transactions is conditioned on affirmative acceptance of the versioned Terms. The accepting individual represents that the individual is authorized to bind both the individual and every organization identified in the acceptance receipt. The acceptance receipt, credential event, wallet signature, terms version, hash, timestamp, role, represented principal, interface version, chain, contract and mission identifiers constitute admissible evidence of assent and attribution.

3. EXCLUSIVE PARTICIPANT RESPONSIBILITY

Each **Participant** acts solely for its own account and bears sole, exclusive, continuing and non-delegable responsibility for: (a) its objectives, instructions, prompts, jobs, acceptance criteria, decisions and approvals; (b) its personnel, agents, contractors, users and credentials; (c) all content, data, personal information, confidential information, trade secrets, intellectual property, licences and permissions supplied or referenced; (d) wallet custody, keys, signatures, devices, infrastructure, endpoints, integrations, access controls, backups and incident response; (e) all work, deliverables, votes, validations, challenges, reuse, monitoring, deployment and downstream consequences; (f) employment, worker classification, payroll, benefits, insurance, health and safety and contractor obligations; (g) every tax, duty, levy, withholding, remittance, invoice, record, return, information report and filing arising from its activity; (h) sanctions, export control, anti-bribery, anti-money-laundering, privacy, cybersecurity, consumer, professional, licensing, sectoral and other regulatory compliance; and (i) independent legal, tax, financial, technical, security and professional advice.

4. USER-TO-USER RELATIONSHIPS

Every work relationship, job, scope, deliverable, validation, challenge, payment, settlement expectation, confidentiality obligation, intellectual-property arrangement, employment or contractor relationship, service level, warranty, remedy and dispute exists solely among the Participants who create or accept it. Each **Participant** must document its own agreement and pursue its own counterparty. No **Participant** may represent that any Protected Party has assumed, guaranteed, insured, underwritten, supervised or become a party to a user-to-user obligation unless a separate written instrument expressly states otherwise.

5. ASSUMPTION OF RISK

Each **Participant** knowingly and voluntarily assumes all risks associated with artificial intelligence, autonomous or semi-autonomous systems, software, smart contracts, digital assets, cryptographic keys, validators, networks, bridges, oracles, third-party services, open-source components, content-addressed storage and irreversible transactions, including error, hallucination, omission, bias, model or tool failure, loss of data, privacy breach, cyberattack, exploit, logic error, reentrancy, upgrade failure, chain reorganization, congestion, front-running, MEV, failed transaction, slashing, loss of keys, market volatility, illiquidity, regulatory change, tax recharacterization, validator error, collusion, non-participation, dispute delay, force majeure and total loss of digital assets. The **Participant** is solely responsible for deciding whether, when and how to act on any output.

6. NO RELIANCE; NO DUTY TO INTERVENE

Outputs, demonstrations, scores, decisions, Dockets, ProofBundles, validations, attestations, Chronicle entries and capability objects are inputs to the **Participant's** own judgment. The **Participant** must independently verify every consequential claim and obtain all required approvals. No Protected Party undertakes any duty to monitor participants, supervise work, review legality,

perform KYC or AML, withhold or remit taxes, issue forms, preserve data, maintain availability, resolve disputes, reverse transactions, rescue assets, recover keys, insure losses, provide professional advice, or achieve any result.

7. AS-IS PROVISION; DISCLAIMER OF WARRANTIES

To the maximum extent permitted by applicable law, the System and all related materials are provided AS IS, AS AVAILABLE and WITH ALL FAULTS. All express, implied, statutory and collateral warranties, representations, conditions and duties are disclaimed, including merchantability, quality, fitness for purpose, title, non-infringement, accuracy, completeness, security, availability, interoperability, legal compliance, tax treatment, error-free operation, uninterrupted operation, value, liquidity and any particular outcome.

8. RELEASE, WAIVER, COVENANT NOT TO SUE AND NON-RECOURSE

To the maximum extent permitted by applicable law, each **Participant** irrevocably releases, waives and discharges the **Protected Parties** from every claim, demand, action, cause of action, loss, liability, damage, cost and expense arising from or related to **Participant** Activity, and covenants not to sue or seek contribution, subrogation, restitution, tracing, disgorgement, constructive trust, lien, attachment, garnishment, security interest or other recourse against any Protected Party or protocol-associated balance, stake, bond, token unit, reserve, escrow, reward, fee, liquidity position, smart-contract asset or technical accounting entry, except for a participant claim expressly credited by deployed code to that **Participant**.

9. HOLD HARMLESS; PARTICIPANT-CAUSED MATTERS

To the maximum extent permitted by applicable law, each Participant agrees to hold harmless every Protected Party from third-party claims, liabilities, assessments, taxes, penalties, interest, losses, damages, costs and expenses arising from or relating to: Participant Activity; a user-to-user relationship created or accepted by the Participant; the Participant's content, data, instructions, wallet, keys, systems, work, validation, challenge, reuse, deployment or public statement; breach of these Terms; infringement or misappropriation; a privacy or cybersecurity event; an employment or worker claim; a tax, withholding or reporting obligation; a sanctions or regulatory matter; or an act or omission of a person using the Participant's credentials. No Participant may purport to admit fault for, bind, restrict or impose an obligation on a Protected Party without that Protected Party's prior written consent. This Article does not create an independent duty to defend or advance legal or expert costs. This Article does not apply to a Protected Party's own intentional or gross fault, or to any liability that applicable law does not permit to be excluded, limited or transferred.

10. TAXES, WITHHOLDING AND RECORDS

All taxes and fiscal consequences arising from Participant Activity are borne by the Participant whose activity creates them, subject to any mandatory duty that applicable law places directly on another person. Each Participant shall determine classification, valuation, source, timing, basis, reporting, withholding, collection, remittance and documentation; maintain complete records; issue required invoices and forms; and pay all taxes, duties, levies, penalties and interest for which it is responsible. No Protected Party undertakes to calculate, withhold, collect, remit, report or issue tax forms for a Participant unless a separate signed agreement expressly provides otherwise.

11. \$AGIALPHA AND DIGITAL-ASSET ACTIVITY

Any acquisition, holding, transfer, bonding, staking, escrow, reward, refund, forfeiture, challenge, validation, settlement or other use of \$AGIALPHA or a digital asset is undertaken solely at the **Participant's** initiative, for the **Participant's** account and at the **Participant's** risk. The **Participant** is exclusively responsible for legality, eligibility, suitability, custody, accounting, valuation, tax treatment and regulatory classification. No equity, ownership, dividend, revenue share, yield, redemption, appreciation, liquidity, price support or profit is promised or guaranteed.

12. NON-JOINDER; USER-TO-USER MATTERS

Each Participant shall keep every user-to-user matter between the relevant Participants and shall not name, join, implead, seek recovery from or otherwise involve a Protected Party solely because of a dispute between Participants, that Protected Party's association with the System, or the mere use, publication, reference or availability of the System, documentation, interface, smart contract or technical infrastructure. If a Protected Party is named contrary to this Article, the responsible Participant shall promptly take all reasonable steps within its control to discontinue the claim against, or seek dismissal of, that Protected Party. This Article does not restrict lawful process, a direct claim expressly permitted by a separate signed agreement, or any right, remedy, forum or obligation that applicable law does not permit to be waived, limited or transferred.

13. PROFESSIONAL DISPUTE PREVENTION AND MONTRÉAL FORUM

Before commencing a permitted claim against a Protected Party, a Participant must deliver a particularized written Claim Notice, preserve all relevant evidence, impose an internal legal hold, observe a 30-day standstill and confidentiality period, and participate in a senior-representative conference. Technical or accounting issues may be referred to independent expert determination. Unresolved disputes shall proceed to confidential mediation in Montréal, Quebec, Canada and, if not resolved, to confidential final and binding arbitration seated in Montréal before one independent arbitrator, in English or French as lawfully selected. Any court proceeding permitted for interim relief, enforcement, homologation or a non-arbitrable matter shall be brought exclusively in the courts of the Judicial District of Montréal, Quebec. Each professional Participant waives representative,

collective, consolidated and class proceedings and objections based on venue or forum non conveniens, to the maximum extent permitted by applicable law.

14. ELECTRONIC EVIDENCE, RECORDS AND SECURITY

Each **Participant** shall preserve terms versions, hashes, receipts, signatures, wallet events, logs, prompts, outputs, source records, approvals, ProofBundles, validator records, Dockets, tax records and deployment records for at least seven years or the longer period required by law. Electronic records, cryptographic signatures, content hashes, blockchain records, interface logs and acceptance receipts may be used as evidence of identity, authority, instruction, assent, attribution, timing and state.

15. PROTECTED PARTIES; THIRD-PARTY BENEFICIARIES

Protected Parties means every author, publisher, designer, researcher, developer, maintainer, contributor, licensor, administrator, reviewer, validator, moderator, node provider, interface provider, infrastructure provider, contractor, adviser, affiliate, officer, director, employee, agent, delegate, successor and assign associated with, contributing to, referenced by, or providing any component or material relating to GoalOS, AGI ALPHA, AGI Jobs, AGI Nodes, Chronicle, the Validated Skill Graph, \$AGIALPHA, related namespaces, documentation, software, smart contracts, interfaces, APIs or deployments. Each Protected Party is an intended third-party beneficiary entitled to enforce the release, non-recourse, hold-harmless, limitation, non-joinder, confidentiality and dispute provisions directly.

16. LIMITATION OF LIABILITY

To the maximum extent permitted by applicable law, no Protected Party shall be liable for indirect, incidental, consequential, exemplary, special, punitive or aggravated damages, loss of profit, revenue, business, opportunity, goodwill, data, privacy, digital assets, market value, anticipated savings or replacement cost. The aggregate liability of all **Protected Parties** arising from a single event or related series of events shall not exceed CAD 100, or any greater minimum amount that applicable mandatory law requires.

17. GENERAL

These Terms, the applicable full terms, the acceptance receipt and the deployed technical rules constitute the entire agreement concerning Participant Activity. The deployed code determines technical state transitions; these Terms allocate contractual responsibility and risk. Amendments may be published in versioned form and apply prospectively upon acceptance or continued use where lawful. Invalid or unenforceable provisions shall be severed or reduced to the minimum extent necessary; the remainder survives. No waiver is continuing. The Participant may not assign rights or obligations without prior written consent. Sections concerning responsibility, risk, release, non-recourse, hold-harmless, taxes, digital assets, non-joinder, evidence, confidentiality, dispute resolution, limitation and third-party beneficiary rights survive indefinitely. Mandatory and non-waivable law prevails only to the minimum extent legally required.

SCHEDULE A • ENTERPRISE PARTICIPATION RECEIPT

CONDITION PRECEDENT

This receipt must be completed and bound to the applicable mission, interface, transaction or deployment before any protected function is used.

Receipt field	Recorded value / acknowledgment
Terms version	GOS-EPUR-2026.07-v2.1
Canonical terms hash	sha256:adc7ee767ea566ba2aa12885e50bbfd7bf22c65708b00ddfd292772fac8298cd
Accepting person	_____
Represented organization	_____
Role / capacity	_____
Email / notice address	_____
Mission / interface / contract ID	_____
Acceptance timestamp	_____
French version remitted	YES / Date: _____
Express language election after French delivery	FRENCH / ENGLISH / BOTH
Authority representation	I have authority to bind myself and the represented organization.
Responsibility acknowledgment	I accept exclusive responsibility for the Participant Activity described in the Terms.
Risk acknowledgment	I knowingly accept the technical, economic, legal, tax, security and irreversibility risks described in the Terms.
Protective covenants	I accept the release, non-recourse, hold-harmless for Participant-caused matters, participant-to-participant allocation and non-joinder provisions.
Montréal dispute protocol	I accept the notice, preservation, Montréal mediation, Montréal arbitration and Montréal court provisions.
Signature / cryptographic signature	_____

PARTICIPANT EXECUTION CERTIFICATE

The Participant certifies that it has reviewed the complete Instrument, had the opportunity to obtain independent advice, accepts the allocation of responsibility and risk, confirms the authority and language-election representations recorded in Schedule A, and directs the System to proceed only within the scope identified below.

GOALOS / PARTNER DEMONSTRATION RUNBOOK

Present the system. Prove the usefulness.

A precise facilitation guide for a 12-minute executive demonstration, a 30-minute partner session and a first-mission close.

Do not ask the room to believe a grand claim. Ask the system to prove one consequential mission.

FINAL PRODUCTION PRESENTER EDITION · JULY 2026

Use with GoalOS_Partner_Briefing.pptx and GoalOS_Partner_Demonstrator.html. The demo is offline, browser-local, receipt-gated and illustrative.

Set the room up for a decision - not a technology tour.

- Open START_HERE.html and confirm the interactive demonstrator, briefing deck, sample decision packet and Enterprise Participation Instrument open locally.
- Select one audience-relevant mission: partnership, procurement, launch readiness or defensive remediation.
- Know the audience's real decision, deadline, risk tolerance, evidence access and review authority.
- Keep the demonstrator at 100% zoom. Use Presenter Mode only after confirming the display resolution.
- Have the sample Governed Decision State PDF open as proof of the final output, not merely the interface.
- Do not lead with \$AGIALPHA, planetary scale or a “Holy Grail” label. Lead with the decision problem and the proof gap.

OPENING LINE

AI output is abundant. Institutional authority is scarce. GoalOS is the operating layer that decides what autonomous work must prove before it can matter.

What success looks like

The executive understands the category GoalOS is a Proof OS: objective to proof to bounded decision to reusable capability.	The buyer sees a first use case The system can be applied to an actual decision in the next 15 business days.
The reviewer trusts the boundary The presentation separates implemented, reference-ready, planned and pending evidence.	The meeting ends with a mission A sponsor, objective, reviewer, evidence boundary and decision deadline are identified.

02 · THE 12-MINUTE EXECUTIVE DEMONSTRATION

A tight sequence that moves from problem to proof.

Time	Move	Presenter action
0:00-1:15	Frame the problem	Show slide 2. Say: "The bottleneck is no longer output. It is deciding which output deserves authority."
1:15-2:30	Define the product	Show slide 3. Explain the Governed Decision State: claims, evidence, contradiction, risk, action, memory and rollback.
2:30-3:30	Show the operating law	Show slide 5. Emphasize that each gate narrows authority and unsupported claims become visible Proof Debt.
3:30-6:30	Run one mission	Open the demonstrator. Select Strategic Partnership Diligence and press Run Mission. Narrate each stage in one sentence.
6:30-8:00	Inspect the decision	Read the bounded decision, four closing conditions and "ADMIT WITH SCOPE" verdict.
8:00-9:30	Open the Evidence Docket	Show the claims matrix, blocked production claim, contradiction register, proof debt and replay tree.
9:30-10:30	Show the durable asset	Explain that Chronicle admits only scoped, replayable capability; raw output does not become memory.
10:30-11:15	Establish credibility	Show slide 13. State exactly what is specified, implemented, reference-ready and pending.
11:15-12:00	Close on a real mission	Show slide 14 or 15. Ask: "Which consequential but reversible decision should we prove first?"

Narration for the live mission

- Mission Contract: "We freeze the decision, scope, proof level, reviewers and rollback before autonomous work begins."
- Proof Debt: "Every unsupported claim becomes visible work or remains blocked."
- AGI Jobs: "The system creates mission-specific proof contracts rather than generic task sprawl."
- Evidence Docket: "The reviewer can reconstruct what happened, what passed and what remains unproven."
- Validation: "Independent review may approve, repair, reject, quarantine or hold."
- Chronicle: "Only admitted, scoped and replayable capability may influence future work."

03 · THE 30-MINUTE PARTNER SESSION

Use the additional time to expose the operating model.

Time	Section	Purpose
5 min	Partner decision context	Decision, deadline, value at risk, reversibility, evidence access and review authority.
8 min	Live GoalOS mission	Run the closest use case, inspect the Docket and export the mission JSON or Markdown Docket.
5 min	Business architecture	Proof Mission Sprint -> Enterprise Proof OS -> Private VSG -> Managed Nodes -> Proof Network.
4 min	Institutional safeguards	Enterprise participation framework: participant authority, exclusive user responsibility, risk assumption, release, hold-harmless, participant-to-participant matters, non-joinder, evidence preservation and the Montréal professional dispute pathway.
4 min	Evidence status	Specified vs implemented vs reference-ready vs planning-ready vs pending.
4 min	Pilot design	Name the objective, sponsor, reviewer, private evidence boundary and 15-business-day close.

Questions that convert interest into a mission

- Which decision has high value but is still reversible?
- What claim is currently being accepted without enough evidence?
- Who must be able to challenge or reject the result?
- Which evidence is private, privileged, regulated or commercially sensitive?
- What conditions would justify a limited pilot, and what must remain blocked?
- What would a successful result improve in the next related decision?

PILOT QUALIFICATION RULE

Choose a mission with a real decision, accessible evidence, an independent reviewer, a bounded action and a credible rollback. Avoid missions that require unsupported production autonomy or professional advice.

04 · HIGH-CALIBRE PARTNER QUESTIONS

Answer with precision, not hype.

Question	Disciplined answer
Is this another agent orchestration platform?	No. Agent execution is only one layer. GoalOS governs what work must prove before it can be trusted, paid, remembered, reused or propagated.
What is the product today?	A browser-local partner demonstrator, a reference proof institution and a Proof Mission operating method that produces Governed Decision States and Evidence Dockets.
What is the moat?	Accumulated evidence-backed capability: scope, method, replay, validator history, delayed outcomes, risk, rollback, policy and lineage.
Where does \$AGIALPHA fit?	\$AGIALPHA is the bonded-authority rail around payment, trust, challenge, reuse, node eligibility and upgrades. It is not equity, a dividend, a guarantee or the intelligence itself.
Can customers avoid token complexity?	Yes. Ordinary customers can purchase fiat-denominated proof services while professional providers and validators supply protocol security behind the scenes.
Is this production-ready?	The doctrine is specified, the browser institution is implemented and reference runtime/contract packages exist. Reviewed live deployment and independent replay remain gated.
How are responsibility and recourse allocated?	Each Participant acts solely for its own account and contractually assumes exclusive responsibility for its objectives, data, content, systems, personnel, wallets, transactions, taxes, licences, compliance, security, decisions and downstream use. Participation also carries release, non-recourse, hold-harmless for Participant-caused matters and non-joinder obligations in favour of the Protected Parties. User-to-user matters remain between the relevant Participants.
Why now?	AI has made output cheap. Institutions increasingly need evidence, review, rollback, memory control and accountability before autonomous work can carry authority.
What is the first commercial wedge?	One bounded Proof Mission on a consequential decision, followed by recurring Proof OS only after bilateral value is demonstrated.
What would falsify the proposition?	Failure to produce decision-useful evidence, independent replay, lower proof debt, better bounded action or reusable capability compared with simpler baselines.

Use strong claims that the evidence actually supports.

Control	Approved formulation / prohibition
Say	“GoalOS is a proof-to-capability architecture and implemented browser-local reference institution.”
Say	“The product turns one objective into a Governed Decision State with claims, evidence, risk, action and rollback.”
Say	“\$AGIALPHA makes accepted proof economically accountable within the protocol design.”
Say	“The system is architecturally pointed at proof-gated open-ended work; real missions and independent replay determine empirical authority.”
Do not say	“GoalOS has achieved AGI, ASI or superintelligence.”
Use when relevant	“Participation is governed by versioned user-responsibility, risk-assumption, release, hold-harmless, participant-to-participant, non-joinder and Montréal dispute terms.”
Do not say	“\$AGIALPHA guarantees value, profit, yield, liquidity or appreciation.”
Do not say	“The current demonstration is an external audit, production certification or legal opinion.”

Closing language

FINAL CLOSE

We are not asking you to endorse the full long-range thesis. Give GoalOS one consequential, reversible objective. Let the system produce the proof, the boundary and the decision. Then expand only if the evidence earns it.

Immediate next actions

- Select the first mission and name the executive sponsor.
 - Define the decision deadline and the maximum authority the pilot may grant.
 - Identify the independent reviewer and private evidence boundary.
 - Freeze the Mission Contract and launch the 15-business-day proof cycle.
 - Review the Evidence Docket, Chronicle verdict and reusable capability passport.
- Presenter reminder: the strongest impression comes from disciplined specificity. Show the system, show the artifacts, show the participation receipt, show the decision boundary, and end with a real mission.
