

Skillos Public Launch Dossier

Public-safe meeting archive - reference implementation - controlled reference workflow

Date: 2026-05-28 Live: <https://montrealai.github.io/skillos/> GitHub: <https://github.com/MontrealAI/skillos>

The graphic features a city skyline at sunset with a flag on a mountain peak. The flag reads 'SKILLOS BUILDING THE INFRASTRUCTURE FOR SELF-IMPROVING AI AGENTS.' The main text reads 'WE JUST LAUNCHED SKILLOS AN OPEN-SOURCE PROOF THAT AI-AGENT WORK CAN COMPOUND.' Below this is a flowchart: JOBS (Work gets done.) > TRACES (Traces get captured.) > TESTED SKILLS (Traces become tested skills.) > RELEASES (Skills get released.) > BETTER UNIT ECONOMICS (Agents improve. Economics improve.). To the right is a box: 'PROOF IS LIVE. REFERENCE WORKFLOW. REPRODUCIBLE PROOF. MEASURABLE COMPOUNDING.' Below the flowchart are four metrics: 62% COST REDUCTION (per job), 62% TIME REDUCTION (per job), +46 PTS QUALITY GAIN (reference workflow), and \$117,700 PROJECTED ANNUAL SAVINGS (under demo assumptions). At the bottom are three sections: 'SEE THE PROOF' with a live dashboard link, 'OPEN SOURCE' with a GitHub link, and 'THE ERA OF SELF-IMPROVING AI AGENTS HAS BEGUN.' with a tagline.

MONTREAL.AI

WE JUST LAUNCHED

SKILLOS

AN OPEN-SOURCE PROOF THAT AI-AGENT WORK CAN COMPOUND.

JOBS
Work gets done.

TRACES
Traces get captured.

TESTED SKILLS
Traces become tested skills.

RELEASES
Skills get released.

BETTER UNIT ECONOMICS
Agents improve. Economics improve.

PROOF IS LIVE.
REFERENCE WORKFLOW.
REPRODUCIBLE PROOF.
MEASURABLE COMPOUNDING.

62% COST REDUCTION
per job (reference workflow)

62% TIME REDUCTION
per job (reference workflow)

+46 PTS QUALITY GAIN
(reference workflow)

\$117,700 PROJECTED ANNUAL SAVINGS
(under demo assumptions)

SEE THE PROOF
montrealai.github.io/skillos/
Live dashboard. Live proof.

OPEN SOURCE
github.com/MontrealAI/skillos
Open code. Open future.

THE ERA OF SELF-IMPROVING AI AGENTS HAS BEGUN.
We build. They compound. We lead.

Skillos is an open-source reference implementation. Results are based on one reference workflow in a controlled environment.
Not financial advice. Not a guarantee of future results. Your results may vary.

Skillos proves the mechanism. Pilot 001 proves the market.

Executive Summary

Skillos is an open-source proof that AI-agent work can compound. Jobs become traces. Traces become tested skills. Tested skills improve future work. The current public proof is a reproducible reference workflow in a controlled environment. Pilot 001 turns that mechanism into market proof using one practical workflow with human approval and aggregated results.

The launch objective is simple: show the live proof, explain the mechanism, align the room around Pilot 001, and leave with owners, partners, and dates.

What Exists Today

- A live public proof dashboard.
- A public GitHub repository with a reference implementation.
- GitHub Actions verification and deployment.
- A controlled reference workflow based on sales follow-up emails from call notes.

- Public-safe materials for meeting participants and future historical reference.

The Mechanism

Work -> Trace -> Lesson -> Tested Skill -> Release -> Better Future Work

SkillIOS records what happened, turns repeated corrections into lessons, converts lessons into bounded skill updates, tests candidate updates, and releases only approved versions.

Pilot 001

- Workflow: sales follow-up emails from call notes.
- Size: 50-100 real jobs.
- Rule: agent drafts, human approves, nothing is sent automatically.
- Metrics: time, cost, quality, accepted rate, edits, and safety issues.
- Publishing: aggregated results only; no private customer data.

Public Safety Boundary

This public archive contains no private customer data, no private commercial terms, no financing materials, no confidential internal strategy, and no sensitive internal arrangements. Current metrics are reference-workflow results, not audited customer results or guarantees of future outcomes.

Meeting Ask

- Approve the public-safe launch message.
- Identify 1-3 Pilot 001 partners or warm introductions.
- Assign a pilot owner and measurement owner.
- Assign a privacy/compliance reviewer.
- Commit to publishing only safe, aggregated pilot results.

Closing Line

We are not asking people to believe in a pitch. We are showing a live reference proof and asking to test one real workflow.
