

THE FINAL STATE. PROVEN. SELECTED. GOVERNED.

SUCCESSOR Ω

MISSION-SOVEREIGN SUCCESSOR

PHYSICS OF CERTAINTY

SPACETIME CURVATURE
 $G_{\mu\nu} + \Lambda g_{\mu\nu} = \frac{8\pi G}{c^4} T_{\mu\nu}$

ATTRACTOR BASINS
 $\dot{x} = f(x) \quad \mathcal{A}^* = \lim_{t \rightarrow \infty} \phi_t(x)$

WAVE INTERFERENCE
 $\Psi = \sum_n a_n e^{i(k_n x - \omega_n t + \phi_n)}$

ORBITAL MECHANICS
 $h = \sqrt{\mu a (1 - e^2)}$

ENERGY TRAJECTORIES
 $\mathcal{E} = \int L dt \rightarrow \delta \mathcal{E} = 0$

PHASE SPACE
 $(q, p) \in \Gamma \mid \omega = dp \wedge dq$

GAME THEORY OF VICTORY

DECISION TREE
 $\mathcal{D} = (S, A, T, R, \gamma)$

PAYOFF SURFACE
 $u_i : S \times A \rightarrow \mathbb{R}_+$

NASH EQUILIBRIUM
 $\sigma^* \in \prod_i \Delta_i : u_i(\sigma_i^*, \sigma_{-i}^*) \geq u_i(\sigma_i, \sigma_{-i}^*)$

MINIMAX STRATEGY
 $\max_{\pi} \min_{\theta} \mathbb{E}_{\theta} [U(\pi, \theta)]$

CREDIBLE ALTERNATIVES
 $\mathcal{A}_{cred} = \{a \mid u(a) \geq \tau\}$

OPTIMAL POLICY
 $\pi^* = \operatorname{argmax}_{\pi} \mathbb{E} \left[\sum_{t=0}^{\infty} \gamma^t r_t \right]$

PROOF → SELECTION → SOVEREIGNTY

SUSTAINED SUPERIORITY

SUCCESSOR Ω
THE FINAL. THE BEST.
THE MISSION ENDURES.

PROOF FILTERS

- ✓ LOGICAL CONSISTENCY
- ✓ EMPIRICAL VALIDATION
- ✓ ADVERSARIAL ROBUSTNESS
- ✓ MISSION ALIGNMENT
- ✓ LONG-HORIZON VIABILITY

NOT THE FIRST. NOT THE FASTEST.
THE RIGHTFUL SUCCESSOR.
FOR THE MISSION. FOR THE FUTURE.

Ω

SOVEREIGN CONTROL SYSTEM

- ✓ STRATEGIC INTELLIGENCE
- ✓ REAL-TIME ADAPTATION
- ✓ RISK GOVERNANCE
- ✓ RESOURCE ORCHESTRATION
- ✓ INTERGENERATIONAL STEWARDSHIP

VERIFIED BY TRUTH. SELECTED BY REASON. GOVERNED BY WISDOM. ENDURING BY DESIGN.

SUCCESSORS Ω MASTERCLASS

Facilitator Guide · Complete Presenter Edition

Presented by Vincent Boucher · President, MONTREAL.AI & QUEBEC.AI

MONTREAL.AI · QUEBEC.AI | Proof before authority.

What the day must produce

Bring one consequential mission. Leave with its governed succession path.

MASTERCLASS PROMISE

Participants leave with a mission constitution, credible successor portfolio, proof-capital decision, first AGI Jobs, Gym and Verifier specification, Fresh-Proof plan, Authority Envelope and 90-day activation path.

- Mission-first: never collapse into generic AI strategy.
- Decision-first: each activity ends in one attributable decision sentence.
- Verifier-first: reward truth governs autonomous scale.
- Refusal-preserving: retain, repair, reserve, hedge, reject and stop remain legitimate.
- Proof before authority: capability never grants power automatically.

Pre-session checklist

Area	Required preparation
Participants	Decision owners, operators, risk/compliance, finance, technical leads and the accountable principal.
Pre-work	Each team nominates one repeated consequential mission and its incumbent.
Room	Pods of 4-6, one main screen, wall space, timer and evidence scribe.
Files	Local PPTX, PDF backup, participant workbook, spreadsheet and templates.
Data boundary	Use synthetic or rights-cleared data when confidentiality is unclear.
Roles	Lead facilitator, timekeeper, evidence scribe and technical producer.

OPENING SCRIPT

Today we are not studying artificial intelligence in the abstract. We are taking one consequential mission and constructing the governed path for deciding what should perform it next. We will separate capability, proof and authority, preserve the right to stop, and leave with one accountable next decision.

Applied full-day agenda

Time	Module
08:30-09:00	Arrival, mission nomination and participant profile.
09:00-09:30	Orientation, cases and governing hierarchy.
09:30-10:15	Why Successors Ω and Activity 1.
10:30-11:25	AI Beta, Spread, Mission Alpha and complete denominator.
11:25-12:15	Mission selection and refusal.
13:00-13:50	Successor Manifold and Successor Book.
13:50-14:30	Mission Advantage Gradient.
14:45-15:25	SEIZE underwriting and proof capital.
15:25-16:05	Bounded AGI Jobs.
16:05-16:45	Gym, Verifier Foundry and candidate portfolio.
16:45-17:15	Fresh Proof, Specialist ASI and verdict.
17:15-17:45	Authority Envelope, Chronicle and 90-day path.
17:45-18:00	Executive synthesis and accountable commitment.

Executive 90-minute agenda

Minutes	Move
0-8	Frame rented Beta and depreciating incumbents.
8-18	Define Mission Alpha and complete denominator.
18-30	Select one mission and refusal criteria.
30-43	Map complete institutions and the Gradient.
43-55	Underwrite one decisive experiment with SEIZE.
55-68	Compile AGI Jobs, Gym and Verifier.
68-78	Freeze one challenger and define proof gates.
78-87	Draft Authority Envelope and 90-day path.
87-90	Secure one accountable next decision.

Module playbook

Module	Facilitator move
Why Successors Ω	Ask which operating assumption is expiring; do not debate AGI timelines.
Beta / Spread / Alpha	Force complete cost, risk, human burden, dependency and Proof Debt.
Mission selection	Reject unclear beneficiaries, unmeasurable outcomes and irreversible consequence.
Successor Manifold	Require complete institutions, not model names.
Gradient	Name the causal bottleneck before prescribing a technique.
SEIZE	Purchase the smallest reversible evidence that changes capital allocation.
AGI Jobs	Specify objective, inputs, tools, limits, evidence, verifier, acceptance and rollback.
Gym + Verifier	The Gym manufactures experience; the Verifier governs reward.
Fresh Proof	Freeze the release; protected-case feedback never returns.
Authority Envelope	Scope, expiry, monitoring, rollback and revocation are explicit.
Chronicle	Admit only attributable, rights-cleared, current and challengeable evidence.

Activity debrief

- What did you decide in one sentence?
- What evidence would reverse it?
- Who is accountable, and by when?
- What remains prohibited until proof exists?
- What is the next smallest reversible move?

Activity	Required output
1	Whether the incumbent deserves a succession review.
2	Whether apparent advantage survives the complete denominator.
3	Primary, reserve and refused mission.
4	Credible complete successor institutions.
5	Highest-value bottleneck and decisive experiment.
6	Proof-capital ceiling and stop-loss.
7	First sealed AGI Job Graph.
8	Gym, rewards, hard constraints and independent Verifier.
9	Candidate portfolio.
10	Fresh-proof verdict.
11	Authority Envelope and renewal date.

Two longitudinal cases

Invoice Integrity	Building Operations
Fast, evidence-rich and reversible first proof mission.	Sequential, physical and world-model-rich advanced mission.
Invoice, PO, vendor, banking, completion and warranty evidence.	Sensors, work orders, maintenance, weather, occupancy and safety.
Initial authority: recommend, request evidence, reversible hold.	Initial authority: observe, recommend, shadow scheduling, canary.
Prohibited: payment, banking change, contract modification.	Prohibited: unsafe actuation, self-expansion, constraint bypass.
Fresh protected invoice cases.	Protected episodes plus shadow and transfer evidence.

Closing script

SAY THIS WORD FOR WORD

You now have more than an AI idea. You have a mission, a market of possible successors, a proof-capital decision, bounded work, a proof plan and a draft authority boundary. The next step is not to declare victory. It is to execute the smallest decisive proof under an accountable principal - and preserve the right to stop.

Confirm	Status
Mission selected	☐
Principal named	☐
Decision sentence written	☐
Reversal evidence recorded	☐
Proof-capital ceiling approved	☐
First AGI Jobs drafted	☐
Verifier independent	☐
Frozen release defined	☐
Authority ceiling stated	☐
90-day review scheduled	☐
