RENEW

VINCENT BOUCHER · PRESIDENT, MONTREAL.AI & QUEBEC.AI

MISSION-FIRST · NO HYPE · ONLY PROOF

A decision-ready Successor Opportunity Dossier.

Bring one consequential mission.
Leave with its governed succession path.

NAVIGATOR Ω · FRONTIER RADAR · CAPABILITY TWIN · SUCCESSOR BOOK

- 1 Mission Constitution
- 2 Frontier Event + Capability Twin
- 3 Successor Book + Manifold
- 4 SEIZE memo + proof capital
- 5 Bounded AGI Job Graph
- 6 Mission Gym + independent verifier
- 7 Fresh-Proof plan
- 8 Authority Envelope + 90-day activation

DECISION

Retain, repair, reserve, hedge, reject and stop remain legitimate outcomes.

What you will be able to do

Five executive capabilities - not a technical certification.

- 1 Distinguish rented AI Beta, investable Spread and proven Mission Alpha
- 2 **Sense frontier change, map the Successor Manifold and maintain the Successor Book**
- 3 Select the right first mission - and reject the wrong ones
- 4 Compile Bounded AGI Jobs, a Sovereign Mission Gym and an independent verifier
- 5 Separate Specialist ASI proof from the admission that creates Successor Ω

DECISION

a precise mission and a governed succession path.

The complete Masterclass journey

From frontier sensing to the successor to the successor

CHRONICLE → MONITOR → IMPAIR → RE-UNDERWRITE → NEXT SUCCESSION EVENT

No stage inherits proof or authority from the stage before it.

DECISION

Every stage has its own evidence, refusal state and authority boundary.

The governing hierarchy

Five constitutional laws govern the entire Masterclass.

NAVIGATOR Ω

books the opportunity.
It does not promote.

5 Accountable authority
governs Successor Ω

4 Fresh proof governs promotion

3 Foundry governs the algorithms

2 Verifier governs the reward

1 Mission Constitution governs the Gym

DECISION

Capability may justify candidacy. Evidence and accountable authority govern release.

The canonical progression

Four planes. Three discontinuities. No authority by narrative.

SENSING + UNDERWRITING

Navigator Ω → Successor Manifold → Mission Advantage Gradient → SEIZE

NO AUTOMATIC TRANSITION

FORMATION

Bounded AGI Jobs → Sovereign Mission Gym → Frozen Challenger

NO AUTOMATIC TRANSITION

PROOF

Fresh protected work → Specialist ASI [earned comparative state]

NO AUTOMATIC TRANSITION

AUTHORITY + RENEWAL

Accountable admission → Successor Ω → Chronicle → Requalification

DECISION

Formation creates candidacy. Fresh proof creates the verdict. Admission creates Successor Ω .

Two cases make the system tangible

One constitution. Radically different mission physics.

1

INVOICE INTEGRITY

Fast · evidence-rich · reversible
A strong first proof mission.

2

BUILDING OPERATIONS

Sequential · physical · world-model rich
A strong advanced Gym mission.

SAME
CONSTITUTION
DIFFERENT
PHYSICS

SAME CONSTITUTION · DIFFERENT STATE, TRANSITION AND VERIFIER PHYSICS

DECISION

One framework. Two very different mission structures.

OI

WHY SUCCESSORS Ω

Which incumbent assumption is
depreciating faster than your organization
can adapt?

From tools to institutions

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

whether the incumbent deserves a succession review.

Singularity Time is an operating condition

SUCCESSION EXPOSURE RATIO

$$\text{SER} = L_a / H_c$$

adaptation lag

capability half-life

1

Succession Exposure Ratio: $\text{SER} = \text{adaptation lag} / \text{capability half-life}$

2

Optimize Verified Adaptation Velocity - not reckless speed

$\text{SER} > 1 \rightarrow$ architecture assumptions expire faster than governance adapts

DECISION

whether the incumbent deserves a succession review.

The unit of improvement is the mission-bearing institution

1

A model update may improve one component

2

A successor may require new data, verifier, workflow, rights or human roles

3

The policy is one component of the complete institution

4

Complete architecture beats isolated capability

DECISION

whether the incumbent deserves a succession review.

A Verified Succession Institution has six permanent functions

1 SENSING

Frontier Event Record
Capability Twin update

2 UNDERWRITING

Successor Book position
SEIZE memo + stop-loss

3 FORMATION

Successor Manifold
Job Graph + manifests

4 PROOF

Protected scorecard
receipts + signed verdict

5 AUTHORITY

Admission Record
Envelope + fallback

6 COMPOUNDING

Chronicle + failure graph
requalification trigger

DECISION

A capability shock triggers re-underwriting; it does not authorize replacement.

Activity 1 - Identify one depreciating incumbent

GUIDED STUDIO · 12 MINUTES

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

1

What mission is performed repeatedly?

2

Which assumption may now be obsolete?

3

What is the cost of waiting?

4

What is the cost of moving too early?

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

DECISION

02

BETA · SPREAD · MISSION ALPHA

After the complete denominator is counted, is there still a real advantage?

Four objects must not be conflated.

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

whether the apparent opportunity can survive full-cost proof.

AI Beta: powerful, rentable and increasingly common

Frontier models and standard agents raise the baseline

APPARENT ADVANTAGE

Common access may improve everyone without differentiating anyone

WHAT SURVIVES THE COMPLETE DENOMINATOR

Beta can be strategically necessary without being proprietary
Alpha

RENTED BASELINE

DECISION

whether the apparent opportunity can survive full-cost proof.

The Spread is an opportunity - not yet an asset

Distance from the strongest current reference architecture

APPARENT ADVANTAGE

Can disappear after cost, proof, risk, integration and unwind

WHAT SURVIVES THE COMPLETE DENOMINATOR

Must be underwritten before it is built

UNDERWRITTEN GAP

DECISION

whether the apparent opportunity can survive full-cost proof.

Mission Alpha is residual proven advantage

$$\begin{array}{lcl} \text{MISSION ALPHA} & = & \text{PROVEN VALUE ABOVE} \\ & & \text{INCUMBENT + BEST ALTERNATIVE} \quad - \quad \text{COMPLETE BURDEN} \\ & & & & + \text{PROOF DEBT + BASIS RISK} \\ & & & & \\ & & + \text{Quality} & & - \text{Cost} \\ & & + \text{Speed} & & - \text{Tail risk} \\ & & + \text{Reliability} & & - \text{Human burden} \\ & & + \text{Economics} & & - \text{εgym} \end{array}$$

Alpha exists only after the complete denominator and protected comparison.

DECISION

whether the apparent opportunity can survive full-cost proof.

The Proof-Adjusted Alpha Frontier

1

The highest training score does not necessarily win

2

The simplest admissible institution wins when complexity adds insufficient Alpha

3

Retain, repair, reserve, hedge, reject and stop remain valid outcomes

DECISION

whether the apparent opportunity can survive full-cost proof.

Activity 2 - Build the complete denominator

GUIDED STUDIO · 15 MINUTES

- 1 Value above incumbent and best alternative
- 2 Formation, operation, proof and review cost
- 3 Risk, dependency, rights and unwind burden

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

DECISION

03

SELECT THE MISSION

Is this mission valuable, bounded,
repeatable and independently verifiable?

The first proof must be narrow and valuable

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

which mission deserves the first proof-capital allocation.

A strong first mission combines eight properties

**DECISION**

which mission deserves the first proof-capital allocation.

The institution must be able to refuse a mission

REFUSE

- ✗ Vague or unowned objective
- ✗ No independent verifier
- ✗ Inadequate rights or evidence
- ✗ Consequences exceed controls
- ✗ Proof cannot arrive in time

THE ABILITY TO REFUSE IS A GOVERNANCE CAPABILITY.

DECISION

which mission deserves the first proof-capital allocation.

Where verified succession is most investable

01

Financial integrity and reconciliation

02

Verified software and cyber find-fix-verify

03

Building operations, maintenance and logistics

04

Contracts, compliance and governed routing

05

Acquisition underwriting and scientific design

HIGH VALUE · BOUNDED · REPEATABLE · INDEPENDENTLY VERIFIABLE

DECISION

which mission deserves the first proof-capital allocation.

Activity 3 - Shortlist and select

GUIDED STUDIO · 18 MINUTES

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

1 Score three missions

2 Select one primary mission and one reserve

3 Write the mission in one exact sentence

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

DECISION

04

SUCCESSOR MANIFOLD

What materially different complete institutions could perform this mission?

Compare complete institutions - not model brands

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

which credible architectures must enter the comparison.

A candidate successor is a complete institution

1

Policy portfolio: models, planners, specialists, routers and search

2

World model, evidence graph, retrieval, deterministic tools and simulations

3

Critic, independent verifier, uncertainty and failure taxonomy

4

Workflow, humans, rights, identity and operating procedures

5

Authority Envelope, Chronicle, rollback, portability and requalification

COMPLETE INSTITUTION

DECISION

which credible architectures must enter the comparison.

The Successor Manifold is constrained possibility

1

Reachable after a capability, cost, law or market discontinuity

AUTHORITY

2

Bounded by capital, rights, data, time, compute and authority

3

A technically impressive candidate may still be constitutionally unavailable

COMPUTE

CAPITAL

RIGHTS

DATA

TIME

DECISION

which credible architectures must enter the comparison.

Build an architecture market - and maintain a Successor Book

1

INCUMBENT

accepted architecture

2

IMMEDIATE

decisive proof path now

3

CHALLENGER

named catalyst or repair

4

RESERVE

option value, weak
present proof

5

HEDGE

operational fallback

6

RETIREMENT

contain, migrate, revoke
or prohibit

A LIVE BOOK OF OPTIONS - NOT ONE IRREVERSIBLE RECOMMENDATION

DECISION

which credible architectures must enter the comparison.

Activity 4 - Construct seven credible architectures

GUIDED STUDIO · 20 MINUTES

- 1 At least one simple repair
- 2 At least one non-AI alternative
- 3 At least one human-machine design

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

DECISION

MISSION ADVANTAGE GRADIENT

Which bottleneck, if removed, would
create the largest proof-adjusted gain?

Find where the next proof dollar matters most

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

the smallest experiment most likely to change the architecture decision.

The Gradient points toward proof-adjusted improvement

- 1 **Priority = (mission-value gain x confidence) / (total cost + risk)**
- 2 **It may point to better evidence, not a larger model**
- 3 **It may point to a stronger verifier, narrower permissions or deterministic checks**
- 4 **It prices institutional distance, not only technical distance**

**DECISION**

the smallest experiment most likely to change the architecture decision.

Diagnose the causal bottleneck before prescribing a technique

1 Objective or representation

2 Evidence or data

3 Planning or search

4 Specialist coordination

5 Verifier or environment

**CAUSAL
BOTTLENECK**

DECISION

the smallest experiment most likely to change the architecture decision.

Purchase decisive evidence in the right order

PURCHASE DECISIVE EVIDENCE IN THE ORDER THAT REDUCES DECISION UNCERTAINTY

DECISION

the smallest experiment most likely to change the architecture decision.

Activity 5 - State the next decisive experiment

GUIDED STUDIO · 15 MINUTES

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

1 What bottleneck do you believe dominates?

2 What result would falsify that belief?

3 What is the cheapest experiment that can change the architecture decision?

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

DECISION

06

SEIZE UNDERWRITING

What is the smallest reversible evidence purchase that can change the decision?

Buy the decision before the build

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

proceed, retain, repair, reserve, hedge, reject or stop.

SEIZE converts a succession event into one bounded proof decision

SURFACE · EVALUATE · INSTANTIATE · ZERO IN · ELEVATE

DECISION

proceed, retain, repair, reserve, hedge, reject or stop.

Proof capital is an option premium - not a blank cheque

1

Fund only evidence that can change the decision

2

Preserve reversibility and named stop conditions

3

Scale only as mission, rights, verifier and economics become legible

4

If evidence cannot change the decision: STOP

PROOF
CAPITAL

OPTION PREMIUM · NOT A BLANK CHEQUE

DECISION

proceed, retain, repair, reserve, hedge, reject or stop.

Every legitimate SEIZE verdict remains open

PROMOTE

valid institutional state

RETAIN

valid institutional state

REPAIR

valid institutional state

RESERVE

valid institutional state

HEDGE

valid institutional state

REJECT

valid institutional state

STOP

valid institutional state

DECISION

proceed, retain, repair, reserve, hedge, reject or stop.

Activity 6 - Complete the SEIZE Underwriting Card

GUIDED STUDIO · 20 MINUTES

1 Opportunity and incumbent impairment

2 Best candidate and strongest anti-recommendation

3 Proof-capital ceiling and stop-loss

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

DECISION

07

BOUNDED AGI JOBS

What exact work, evidence, verifier and rollback must be specified?

Sealed work orders for intelligence

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

a typed work-and-proof graph rather than a vague request for autonomy.

Every AGI Job is a sealed work-and-proof contract

- 1 Objective + principal
- 2 Inputs + authorized data
- 3 Tools + action capability
- 4 Prohibited actions
- 5 Budget + expiry
- 6 Deliverable schema
- 7 Evidence obligation
- 8 Independent verifier
- 9 Acceptance predicate
- 10 Escalation + rollback

SEALED AGI JOB

DECISION

a typed work-and-proof graph rather than a vague request for autonomy.

The AGI Job Graph constitutes - and constrains - the complete candidate

CAPABILITY + EVIDENCE MAY COMPOSE. AUTHORITY NEVER COMPOSES.

DECISION

a typed work-and-proof graph rather than a vague request for autonomy.

Separate powers. Prevent authority composition.

PRODUCER

CONSTRUCT

IS NOT

VERIFIER

MEASURE

IS NOT

ADMITTER

GRANT STATUS

EXECUTION IS NOT ACCEPTANCE. ACCEPTANCE IS NOT CHRONICLE ADMISSION. CHRONICLE ADMISSION IS NOT AUTHORITY.

DECISION

a typed work-and-proof graph rather than a vague request for autonomy.

Illustrative job graph: invoice integrity

Every transition carries a proof receipt; the final decision remains human.

DECISION

a typed work-and-proof graph rather than a vague request for autonomy.

Activity 7 - Compile the first five AGI Jobs

GUIDED STUDIO · 22 MINUTES

1 One producer job

2 One critic job

3 One verifier job

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

DECISION

08

SOVEREIGN MISSION GYM

Can the environment teach useful capability
without allowing the candidate to game the
reward?

Manufacture trustworthy experience

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

whether the mission is trainable and the verifier is trustworthy.

Mission-to-Gym Constitutional Compiler

HIDDEN STATE · ROLE-SPECIFIC OBSERVATIONS · BOUNDED ACTIONS · NON-COMPENSABLE CONSTRAINTS

DECISION

whether the mission is trainable and the verifier is trustworthy.

Five Gym families manufacture experience without laundering proof

1

FORMATION

visible · iterative · adaptive

2

ADVERSARIAL

attack reward · tools ·
verifier

3

TRANSFER

new populations · regimes ·
failures

4

FRESH PROOF

blind cases · exact release ·
custody

5

CANARY + REQUALIFICATION

shadow · reversible action ·
monitoring

THE GYM THAT TEACHES MUST NOT BE THE GYM THAT CERTIFIES.

DECISION

whether the mission is trainable and the verifier is trustworthy.

The Verifier Foundry is the moat

- 1 Outcome, constraint, evidence and process verifiers
- 2 Economics, transfer and anti-gaming verifiers
- 3 Attack false acceptance, hidden rescue, leakage and collusion
- 4 Measure false rejection as well as false acceptance
- 5 No trustworthy verifier → no autonomous training scale

VERIFY

THE MOAT

DECISION

whether the mission is trainable and the verifier is trustworthy.

Optimize reward; never trade away constitutional constraints

OPTIMIZE

Quality · verified value · speed
Evidence · reliability · transfer
- complete cost · human burden

NEVER TRADE AWAY

Critical miss · unauthorized action
Safety · rights · privacy · governance
Hard gates are non-compensable

ONE CATASTROPHIC FAILURE CANNOT BE OFFSET BY MANY SMALL SUCCESSES.

DECISION

whether the mission is trainable and the verifier is trustworthy.

The Gym that teaches must not certify

FORMATION GYM

VISIBLE · ITERATIVE · ADAPTIVE

Teach, mutate, replay, repair

Candidate learning allowed

ONE-WAY
PROOF
FIREWALL

NO RETURN PATH

FRESH-PROOF PLANE

SEALED · INDEPENDENT · NON-LEARNING

Protected cases and scorer

Proof-time updates = 0

DECISION

whether the mission is trainable and the verifier is trustworthy.

Activity 8 - Specify the Gym and verifier

GUIDED STUDIO · 25 MINUTES

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

1 State, observations and actions

2 Reward vector and hard constraints

3 Normal, ambiguous, rare and adversarial scenarios

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

DECISION

09

ALGORITHM & ARCHITECTURE MARKET

Which complete architecture creates the best conservative Mission Alpha?

MuZero is one competitor - not the constitution

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

which candidate portfolio should be trained, preserved or rejected.

Algorithms are routed by mission structure - not prestige

1

FORMAL RULES

Deterministic / neuro-symbolic

2

RICH LOGS

Behaviour cloning / offline RL

3

HIDDEN DYNAMICS

MuZero / world model

4

CONTINUOUS CONTROL

SAC / Dreamer

5

MULTIPLE SPECIALISTS

Learned coordination

MISSION STRUCTURE ROUTES THE ALGORITHM. PRESTIGE DOES NOT.

DECISION

which candidate portfolio should be trained, preserved or rejected.

The Sovereign Alpha Foundry Ω routes a portfolio, not one fashionable algorithm

1 DATA + DEMONSTRATION

Synthetic data, imitation and offline RL
IQL · CQL

2 CONTROL + WORLD MODELS

PPO · SAC · MuZero · Dreamer

3 MULTI-AGENT + SELF-PLAY

Coordination, critics, asynchronous reasoning

4 EVOLUTION + QUALITY DIVERSITY

OpenEvolve · MAP-Elites · architecture search

5 DETERMINISTIC + HUMAN

Rules, formal methods and workflow redesign

Algorithms train components. The Foundry competes complete institutions. Illustrative, not exhaustive.

DECISION

Route a portfolio by mission structure; preserve Pareto alternatives.

When MuZero helps; when it should lose

MUZERO HELPS WHEN

- Sequential decisions
- Hidden delayed dynamics
- Reliable reward
- Enough episodes

MUZERO SHOULD LOSE WHEN

- Compute burden dominates
- Basis risk is high
- Transfer is weak
- Simpler architecture wins

A MODEL OF THE GYM IS NOT YET A MODEL OF REALITY.

DECISION

which candidate portfolio should be trained, preserved or rejected.

Preserve a Pareto Successor Archive

P1

Highest conservative Mission Alpha

P2

Safest under hard gates

P3

Lowest complete burden

P4

Most sovereign and portable

P5

Strongest fresh transfer

P6

Best hedge and known-good fallback

DECISION

which candidate portfolio should be trained, preserved or rejected.

Activity 9 - Route the candidate portfolio

GUIDED STUDIO · 20 MINUTES

- 1 Select the strongest simple baseline
- 2 Select one learned policy candidate
- 3 Select one world-model or planning candidate

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

DECISION

IO

FREEZE & FRESH PROOF

Would this exact frozen release still win on protected representative work?

Training success is not certification

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

whether Specialist ASI has been earned or the candidate must be repaired or rejected.

Freeze one exact institutional release

EXACT RELEASE MANIFEST

- 01 Models, weights, prompts, tools and data
- 02 Workflow, Job Graph, verifier configuration, budget and permissions
- 03 Rights, identity, protected interfaces and environment version
- 04 Rollback target and hashed manifest
- 05 Learning after freeze: prohibited

SHA-256 · RIGHTS · IDENTITY · ENVIRONMENT · ROLLBACK

DECISION

whether Specialist ASI has been earned or the candidate must be repaired or rejected.

The independent Proof Custodian contains no trainer

FROZEN CHALLENGER

- 1 Exact release identity
- 2 Manifest and hashes locked
- 3 Tools, data and permissions frozen
- 4 Learning prohibited after freeze

ONE-WAY EXECUTION

NO RETURN PATH

INDEPENDENT PROOF CUSTODIAN

- 1 Separate identities, credentials and custody
- 2 Protected cases and scorer internals
- 3 Independent statistics and signed verdict
- 4 Thresholds fixed before results arrive

NO TRAINER · NO LEAKAGE · NO PROOF-TIME LEARNING

DECISION

Specialist ASI is earned only by the frozen release on protected representative work.

Specialist ASI requires robust comparative proof

GATE 1

Matched-pair gain and lower confidence bound

GATE 2

Lower tail, critical subgroups and critical errors

GATE 3

Transfer, calibration, abstention and evidence coverage

GATE 4

Complete economics, human burden and no governance regression

GATE 5

Gym-to-reality basis-risk reserve

SPECIALIST ASI IS AN EARNED COMPARATIVE STATE - NOT A BRAND LABEL.

DECISION

whether Specialist ASI has been earned or the candidate must be repaired or rejected.

Four states. No automatic transition.

1

TRAINED CANDIDATE

formed in the teaching plane

IS
NOT
AU
TO
MA
TIC

2

FROZEN CHALLENGER

exact release; manifest locked

IS
NOT
AU
TO
MA
TIC

3

SPECIALIST ASI

fresh superiority earned

IS
NOT
AU
TO
MA
TIC

4

SUCCESSOR Ω

bounded authority admitted

Fresh proof may create state 3. Only separate accountable admission creates state 4.

DECISION

Determine whether Specialist ASI has been earned; admission remains a separate decision.

Activity 10 - Define the Fresh-Successor Gate

GUIDED STUDIO · 20 MINUTES

1 Incumbent and best alternative

2 Fresh representative case distribution

3 Promotion threshold and hard gates

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

DECISION

II

AUTHORITY & SUCCESSOR Ω

What authority, if any, is justified by the fresh evidence?

Capability never creates authority automatically

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

the exact Authority Envelope, expiry, monitoring and rollback.

Authority is a partial order, reconstituted action class by action class

AUTHORITY NEVER EXCEEDS FRESH PROOF

$$A(t) \leq \varphi[E(t)] \leq A_{\max}(m)$$

A4 CONSEQUENTIAL ACTION

A3 REVERSIBLE BOUNDED ACTION

A2 SEALED SANDBOX

A1 RECOMMEND

A0 OBSERVE

DECISION

the exact Authority Envelope, expiry, monitoring and rollback.

Successor Ω is the complete governed institution

COMPLETE
INSTITUTION

- 1 Mission Constitution + exact identity
- 2 Specialist ASI + typed AGI Job Graph
- 3 Data + world models + tools + workflow
- 4 Independent verifier + evidence custody
- 5 Chronicle + rights + degraded modes + rollback
- 6 Authority Envelope + accountable human principal

COMPLETE SUCCESSOR Ω > POLICY

DECISION

Define the exact Authority Envelope, expiry, monitoring, rollback and accountable principal.

Chronicle is constitutional memory - not a chat history

- 1 Admit only evidenced, attributable and rights-cleared capability
- 2 Preserve failures, blocked actions and invalidated assumptions
- 3 Maintain a Negative Capability Graph
- 4 Version, expire, challenge, repair and revoke
- 5 Only what survives reality may compound

**DECISION**

the exact Authority Envelope, expiry, monitoring and rollback.

The successor to the successor

DESCENDANTS INHERIT NEITHER PROOF NOR AUTHORITY.

The current successor may propose descendants. It may not certify or install them.

DECISION

the exact Authority Envelope, expiry, monitoring and rollback.

Activity II - Draft the initial Authority Envelope

GUIDED STUDIO · 18 MINUTES

REQUIRED OUTPUT

One decision sentence +
the evidence that would
change it.

1 What may the successor observe?

2 What may it recommend or prepare?

3 Which actions remain prohibited?

FALSIFIABLE · ATTRIBUTABLE · REVERSIBLE

DECISION

I2

ONE REAL SUCCESSION CYCLE

What will be proved, admitted, measured
and requalified in the next ninety days?

The next threshold is empirical

APPLY EVERY CONCEPT TO THE SELECTED MISSION.

DECISION

a decision-ready Successor Opportunity Dossier and activation path.

The 90-day activation path

1

DAYS 1-15

Navigator event,
Capability Twin and
Mission Constitution

2

DAYS 16-30

Successor Book, Manifold,
Gradient and SEIZE

3

DAYS 31-55

Compile Job Graph, Gym
and verifier

4

DAYS 56-75

Form candidates, freeze
one release and run fresh
proof

5

DAYS 76-90

Admit narrowly, canary,
monitor - or reject cleanly

DECISION

a decision-ready Successor Opportunity Dossier and activation path.

Your Successor Opportunity Dossier

1

Frontier Event, Capability Twin and incumbent ledger

2

Mission Constitution, Successor Book and Manifold

3

Gradient hypothesis, SEIZE memo and proof-capital ceiling

4

Typed AGI Job Graph, Gym specification and verifier

5

Fresh-Proof Gate, Authority Envelope, Chronicle and 30/90/365 plan

DECISION

a decision-ready Successor Opportunity Dossier and activation path.

What the board should monitor

01

SUCCESSION EXPOSURE

SER + Verified Adaptation Velocity

Are assumptions expiring faster than governance?

02

TIME TO DECISION

Time-to-Verified-Successor

How long from frontier event to evidence-backed decision?

03

PROOF POSITION

Proof Coverage + Proof Debt

What remains unproved or dependent on stale evidence?

04

AUTHORITY AT RISK

Envelope exposure + rollback readiness

How much consequence rests on the present evidence state?

05

MISSION ECONOMICS

Successor Gain + complete-denominator efficiency

Is net mission value positive after all burden?

06

COMPOUNDING QUALITY

Chronicle precision + fresh-transfer gain

Does accepted learning improve fresh work?

DECISION

Monitor proof, authority and renewal, not only model performance.

CASE 1 · INVOICE INTEGRITY SUCCESSOR Ω

Ten-job portfolio spans constitution through renewal

Strongest candidate may be deterministic or human-machine

Initial authority: analyze, request evidence and recommend

Still prohibited: move money or alter vendor banking

DECISION

Initial authority: analyze, request evidence and recommend. Moving money remains prohibited.

CASE 2 · PORTFOLIO BUILDING OPERATIONS SUCCESSOR Ω

Hidden state, sequential diagnostics and delayed consequences

Candidate market: rules, offline RL, MuZero, Dreamer and human-machine hybrids

A world model of the Gym is not yet a model of reality

Begin at Observe or Recommend; earn reversible actuation only through fresh physical evidence

DECISION

World-model value must survive fresh physical evidence, canary operation and safety gates.

Live companion: GoalOS Navigator-Gym Verifier-First Foundry

- 1 Frontier Radar, Capability Twin and Successor Book
- 2 Mission Compiler Assurance + typed AGI Job Graph
- 3 Verifier mutation lab + Experience Foundry
- 4 Architecture market + Pareto Successor Archive
- 5 Exact release freeze + independent Proof Custodian
- 6 Proof-adjusted Alpha + authority stop-loss

ONE MISSION · ONE DECISION

DECISION

Use the companion to demonstrate one mission and one institutional decision - not feature theatre.

What you leave with today

- 1 A selected mission and reserve mission
- 2 A credible Successor Manifold
- 3 A SEIZE decision and proof-capital ceiling
- 4 Initial AGI Jobs, Gym, proof and Authority Envelope
- 5 A 90-day route to proceed, repair, retain or stop

THE MASTERCLASS IS THE FRONT DOOR. THE NEXT THRESHOLD IS ONE REAL, PROTECTED SUCCESSION CYCLE.

DECISION

a decision-ready Successor Opportunity Dossier and activation path.

Evidence status and claim boundary

Four distinct states. No upward inference without the required evidence.

E0

CONCEPTUAL ARCHITECTURE

Design hypothesis.
No empirical authority.

E1

SYNTHETIC DEMONSTRATION

Executable and reproducible
mechanism.
Not customer truth.

E2

PROTECTED MISSION PROOF

Exact release on rights-cleared,
fresh representative work.
May earn Specialist ASI.

E3

ACCOUNTABLE PRODUCTION ADMISSION

Rights, security, monitoring, expiry,
rollback and revocation.
Creates Successor Ω.

SYNTHETIC EVIDENCE IS NOT CUSTOMER VALUE IS NOT PRODUCTION AUTHORITY

DECISION

State the evidence level before stating the claim.

Selected foundations and source map

Proprietary constitutional constructs are distinguished from prior technical lineages.

CONSTITUTIONAL CORPUS

- 1 GoalOS Singularity Navigator Ω + SEIZE — v6.0.0
- 2 Successor Ω x AGI Jobs — v2.0.0
- 3 Successors Ω Masterclass — source deck + notes

FORMAL ASSURANCE

- 1 Hoare logic and assume-guarantee contracts
- 2 Lamport-style temporal reasoning
- 3 Capability security and proof-carrying execution

ENVIRONMENTS + SEARCH

- 1 POMDPs · Gymnasium · PettingZoo · OpenSpiel
- 2 MuZero · Dreamer · SAC · offline RL
- 3 Multi-agent learning · self-play · quality diversity / MAP-Elites

Full bibliographies, equations, claim boundaries and reproducibility records are carried by the companion papers.

DECISION

Source discipline is part of proof discipline.

BRING ONE CONSEQUENTIAL MISSION.

NOW PROVE THE SUCCESSION.

Beta is rented. The Spread is underwritten. Candidacy is constituted. Specialist ASI is proven.
Successor Ω is admitted. Authority never exceeds fresh proof.

COMPLETE THE DOSSIER · NAME THE PRINCIPAL · AUTHORIZE THE FIRST BOUNDED PROOF DECISION
