

Quick Start

The fastest path from one commercial objective to a proof-producing revenue institution

Start here

Open the standalone application, describe what you sell in one sentence, correct the assumptions, and use the generated system to design the first paid Proof Mission. Revenue is never guaranteed; irreversible actions remain human-approved.

Five-Minute Orientation

Step	Do this	You receive
1	Open the HTML in a modern browser.	A private, browser-local operating surface.
2	Answer: “What do you sell?”	Draft buyer, offer, pricing, capacity, and funnel assumptions.
3	Use Chief-of-Staff Confirmation.	A corrected commercial objective and editable economics.
4	Review Offer, Pipeline, Sales, Delivery, Proof, Forecast, Leads, Autonomy, and Audit.	A complete revenue institution, with assumptions and gates visible.

Step	Do this	You receive
5	Choose one real customer objective.	A bounded Mission Contract, Proof Debt, jobs, Docket plan, reviewer route, and next decision.

Use the Package in This Order

When	Open	Purpose
First 10 minutes	01_Start_Here + 09_Application	Understand the product and run the one-box experience.
Prepare a session	02_Program + 03_Delivery	Select the format, agenda, case, facilitator script, and workbook.
Sell the program	04_Sales_and_Growth	Use the offer, pricing, one-pager, proposal, messages, and 90-day plan.
Operate delivery	05_Operations + 07_Templates	Track participants, proof objects, pipeline, economics, and Mission 2.
Explain the architecture	10_Research_Corpus	Use the canonical papers and claim boundaries.
Verify the release	12_QA_and_Integrity	Inspect QA results, manifest, checksums, and release notes.

What Success Looks Like

- A paying customer with a consequential objective and named sponsor.
- A reviewer-ready Evidence Docket rather than a persuasive report.
- A Chronicle decision that admits only scoped, versioned, rollbackable capability.
- A second mission showing measurable improvement without increased unsupported-claim leakage.
- Expansion into recurring Proof OS work, capability licensing, or enterprise deployment.

Operating law

Customers fund the work. Proof unlocks payment. Chronicle preserves what worked. Reinvestment makes the next mission stronger.
